Sea level: In this report, "sea level" refers to the National Geodetic Vertical Datum of 1929 (NGVD of 1929)--a geodetic datum derived from a general adjustment of the first-order level nets of the United States and Canada, formerly called Sea Level Datum of 1929.

Altitude, as used in this report, refers to distance above or below sea level.

GLOSSARY

Terms related to ground water, wells, and measuring water levels, and other hydrologic data, as used in this report, are defined below. Refer to the chart for converting English units to International System (SI) Units on page IV of this report.

AQUIFER: A formation, or group of formations, or part of a formation of rocks, consolidated or unconsolidated, that is water bearing and will yield significant quantities of water to wells and springs. An aquifer may be confined or unconfined. Confined aquifers are overlain by sediments with significantly lower permeability. Unconfined aquifers have no confining bed between the zone of saturation and the surface.

CONFINING UNIT: A formation that is above, or below, or adjacent to one or more aquifers and has a permeability that is low in relation to the permeability of the aquifers.

CASING: A section of pipe typically between land surface and the well screen or open hole that allows access to a water bearing unit and keeps the well open through primarily unconsolidated material.

CASING DIAMETER: The diameter of the casing, in inches.

CASING DEPTH: The depth (length) of the casing, in feet.

DRAINAGE BASIN: A part of the surface of the earth that is occupied by a drainage system, which consists of a surface stream or body of impounded

surface water together with all tributary surface streams and bodies of impounded surface water.

ELEVATION: As used in this report, refers to the distance above or below the NGVD of 1929, that is, the height above or below mean sea level.

GEOLOGIC UNIT CODE: A system of numbers and letters used to designate the aquifer unit into which a well is finished. In this report, 120FLRD refers to undifferentiated rock of the Tertiary System corresponding to the Floridan aquifer; 122HTRN to undifferentiated deposits of the Tertiary System corresponding to the Hawthorn Group; and 110NRSD to undifferentiated surficial sand deposits of the Quaternary System.

HYDROLOGIC UNIT CODE: A geographic area representing part or all of a surface drainage basin of distinct hydrologic features as delineated by the U.S. Geological Survey Office of Water Data Coordination; on State Hydrologic Unit Maps. Each hydrologic unit is identified by an eight-digit number.

INSTRUMENTATION: As used in this report, instrumentation refers to how the water levels were measured.

LINEAR REGRESSION: A simple model of relating a response y to a single quantitative independent variable x in the form of an equation of a straight line.

MEASURING POINT: The point from which the water levels are measured, measuring point is reported as an elevation in feet above NGVD.

MISCELLANEOUS: The word miscellaneous has two distinct usages in this report. When used in the manuscript description section for each well, it refers to the method of recording the elevation of the water in each well by any method other than by a continuous recorder. In Appendix I, miscellaneous refers to the

frequency of measurement of water levels and is any non-repetitive time interval.

NATIONAL GEODETIC VERTICAL DATUM OF 1929: A geodetic datum derived from a general adjustment of the first-order nets of the United States and Canada, formerly called Sea Level Datum of 1929 and abbreviated as NGVD.

NONPARAMETRIC TEST: Statistical process that compares distributions of data and not the parameters themselves or the form of the distribution.

RECORDER: An instrument used to measure water levels continuously.

TAPE DOWN: A method of measuring water levels in wells using a steel tape.

TOWNSHIP, RANGE, SECTION: A locality placement system of the Bureau of Land Management, and upon which the SRWMD defines their site identification system for wells. It is a grid system beginning with a regional baseline (latitude), and a regional meridian line (longitude). Townships are designated, with increasing numbers, north or south of the regional baseline (T1N, T2N, T1S, T2S, etc.); Ranges are designated, with increasing numbers, east or west of the regional meridian (R1E, R2E, R1W, R2W, etc.). Each Township, Range grid is divided into thirty-six quadrants called Sections, for example Section 17 of T2N, R1E.

WATER LEVEL: The depth below the land surface to water in a well, in feet. In this report, all water levels have been converted to elevations, NGVD, by subtracting the measured water level from the elevation of the measuring point. For example, if the measuring point of a well is 70.50 ft., NGVD and a water level for that well is 40.50 ft., then the corresponding elevation of water in that well for that measurement, is 30.00 ft., NGVD.

Statistical Summaries of Ground-Water Level Data Collected in the Suwannee River Water Management District, 1948–1994

By J.J. Collins and L.D. Freeman

INTRODUCTION

Since 1948, ground-water level data have been systematically collected from selected wells in the Suwannee River Water Management District (SRWMD) by the U.S. Geological Survey (USGS), the SRWMD, and other agencies. Records of water levels in the SRWMD (fig. 1), collected by the USGS and SRWMD through 1990, and by the SRWMD from 1990 to 1994, have been published for many years in the USGS annual report series "Water Resources Data for Florida." However, no systematic statistical summaries of water levels in the SRWMD have been previously published.

The need for such statistical summary data for evaluations of drought severity, ground-water supply availability, and minimum water levels for regulatory purposes increases daily as demands for ground-water usage increase. Also, much of the base flow of the Suwannee River is dependent upon ground water. As the population and demand for ground water for drinking water and irrigation purposes increase, the ability to quickly and easily predict trends in ground-water availability will become paramount. In response to this need, the USGS, in cooperation with the SRWMD, compiled this report. Ground-water statistics for 136 sites are presented as well as figures showing water levels that were measured in wells from 1948 through September 1994.

In 1994, the SRWMD and the USGS began a long-term program of cooperative studies designed to better understand minimum and maximum stream

flows and ground-water levels in the SRWMD. Minimum and maximum flows and levels are needed by the district to manage the surface- and ground-water resources of the SRWMD and to maintain or improve the various ecosystems. Data evaluation was a necessary first step in the long-term SRWMD ground-water investigations program, because basic statistics for ground-water levels are not included in the USGS annual data reports such as "Water Resources Data for Florida, Water Year 1994" (Franklin and others, 1995). Statistics included in this report were generated using the USGS computer program ADAPS (Automatic Data Processing System) to characterize normal ground-water levels and departures from normal.

The report has been organized so that the statistical analyses of water levels in the wells are presented following this introductory material, a description of the hydrogeology in the study area, and a description of the statistics used to present the water-level data. Specifically, the report presents statistical analyses for each well, as appropriate, in the following manner:

- Description of the well.
- Hydrographs of ground-water levels for the period of record, for the last 10 years of record, and for the last 5 years of record.
- Graphs of maximum, minimum, and mean of monthly mean ground-water levels for wells with 5 or more years of record.
- Frequency hydrographs (25, 50, and 75 percent) of monthly mean ground-water levels for wells with 5 or more years of record.

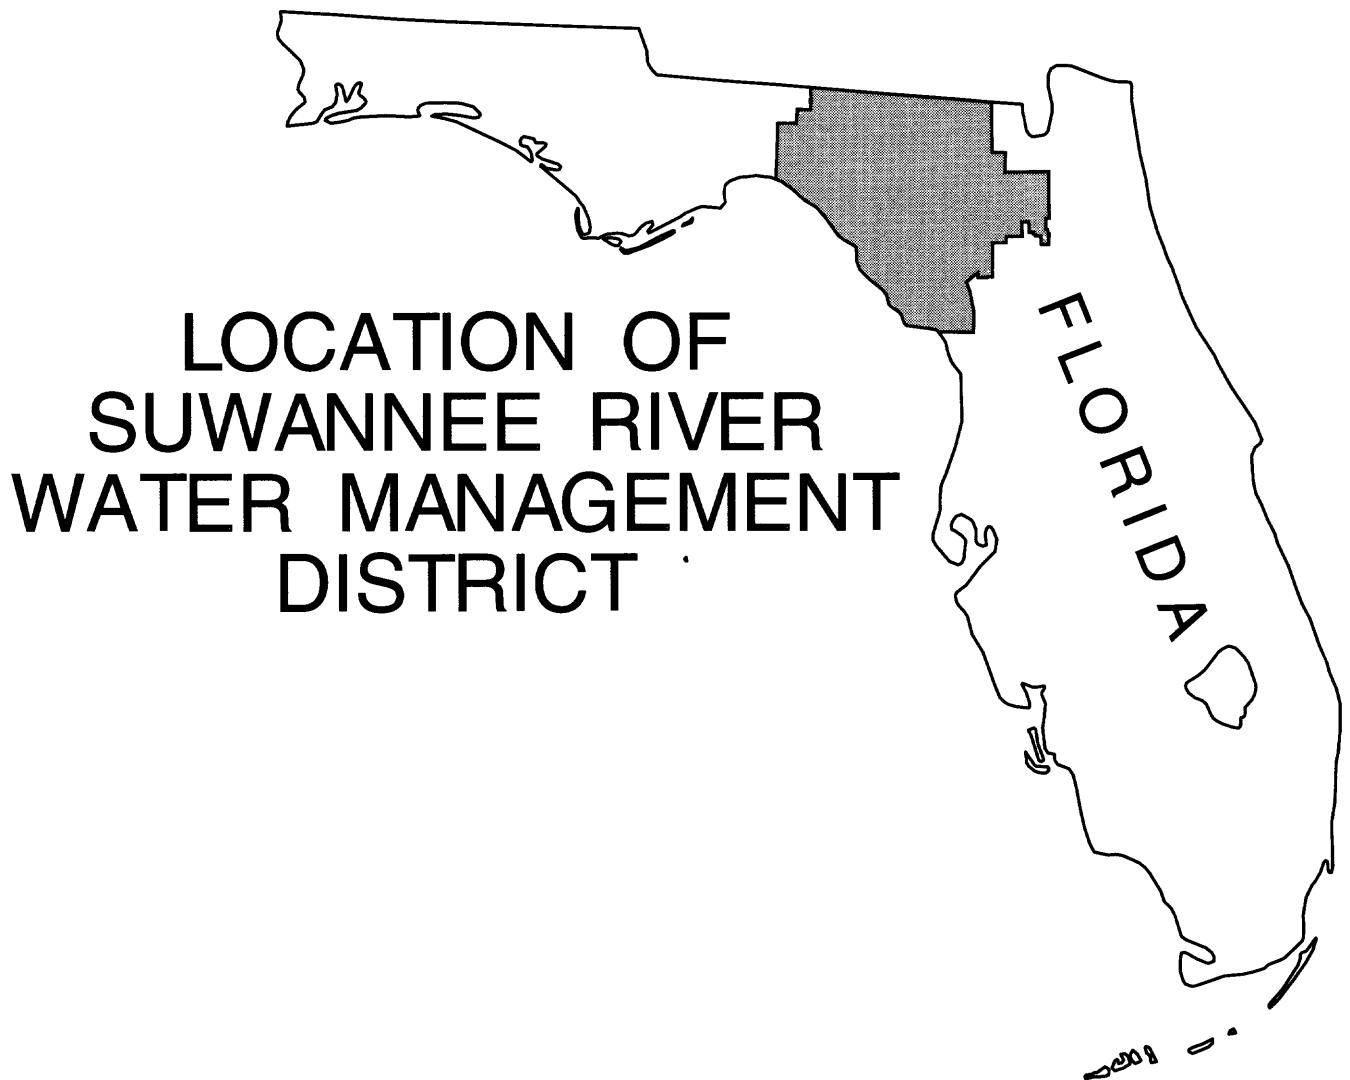

Figure 1. Location of Suwannee River Water Management District.

Water-level data and statistical plots are grouped by county and sorted within the county by ascending site identification number. Well locations are plotted on county maps preceding the well descriptions and hydrographs.

HYDROGEOLOGY

The Suwannee River Water Management District is underlain in parts by three general hydrogeologic units: an unconfined surficial aquifer, the upper confining unit of the Upper Floridan aquifer, and the Upper Floridan aquifer (Miller, 1990). The unconfined surficial aquifer consists of undifferentiated silty sands of Pliocene to Pleistocene and Pleistocene age. Surficial aquifers occur in parts of all counties in the SRWMD, except Dixie (Ron Ceryak, Suwannee River Water Management District, oral commun., 1996). The upper confining unit is composed of Miocene age phosphatic clayey sands of the Hawthorn Group. Within the upper confining unit are thin, higher permeability sediments which are referred to as "intermediate aquifers." Intermediate aquifers occur in parts of Alachua, Baker, Bradford, Columbia, Hamilton, Suwannee, and Union Counties. The Upper Floridan aquifer is composed of a thick sequence of carbonate rocks of Eocene to Oligocene age. The rocks of the Upper Floridan are continuous throughout the SRWMD and are at or near the land surface (unconfined) in all counties except Bradford and Clay. In this report, the aquifer named for each well refers to the aquifer into which the well is finished.

DESCRIPTION OF GROUND-WATER LEVEL STATISTICS

This section provides a description of the summary statistics presented in graphs for each set of water levels measured in the respective wells. Each data set is presented on facing pages. For wells with less than 5 years of record, no statistics were computed, and the graphs have nothing plotted within the axes. Hydrographs for the last 5 and 10 years of record are included for each site so that they can be compared with updated, similar plots in subsequent reports of this type. The scale of the x-axis for the hydrographs shows the year when data was collected. The scale of the y-axis for each graph is the altitude of the water level in feet above mean sea level.

Well information describes location of the well, the aquifer into which it is completed, and the period of record during which water levels have been collected. The well manuscript provides, under various subheadings, the following information as appropriate for each well:

WELL NUMBER.--Each well is given a 15-digit number which consists of a 13-digit number based on the latitude and longitude of the well plus a 2-digit sequential number (for example, 291414082560985) followed by the well name, and the SRWMD well location number (DOF-Cedar Key Tower and -141429001 for the above well). The SRWMD well location number is based on the township, range, and section where the well is located. The well name included in this report is the name used in the SRWMD well data retrieval system.

LOCATION.--Latitude and longitude. This number may differ slightly from the well number. The latitude and longitude is followed by the 8-digit hydrologic unit code (for example, 03110101). These hydrologic units define river basin boundaries.

AQUIFER.--The aquifer name, such as Upper Floridan aquifer of the Tertiary system, followed by the Geologic Unit Code for the Floridan aquifer, such as 120FLRD.

WELL CHARACTERISTICS.--Casing diameter, casing depth, and total well depth.

INSTRUMENTATION.--The elevation of the present Measuring Point for the well. If appropriate, also states that the well has or had a recorder.

DATUM.--The datum to which all ground-water levels are referred. All wells described in this report are referenced to mean sea level.

PERIOD OF RECORD.--The time period for which each well had data collected. An * at the end of this line indicates that this well has a regression curve. A † at the end of this line indicates that water levels prior to the beginning date of the graph or for periods of no data may be in paper files at the U.S. Geological Survey in Tallahassee, Florida.

EXTREME VALUES.--The maximum and minimum values for the period of record for each well. Used without qualification, the value was taken from a recorder; used with the word observed, the

value was taken from a tape-down measurement. Dates given are either the only occurrence or the first occurrence, if that value was reached more than once. These are not necessarily the statistical maximum and minimum values shown in the graphs and listed in Appendix II.

Included in this report is information for water levels in 136 wells. A hydrograph of water levels for the period of record is included for each well. Continuous measurements were made by recorders in 26 of these wells. Instantaneous measurements only were made in 72 of the wells, some of these consisting of scheduled monthly measurements of water levels in network wells, by using a steel tape or some other measuring device. The remaining 38 wells were measured by a combination of instantaneous measurements and by use of a continuous recorder. Less than 5 years of record are available for 10 of the 136 wells.

On certain period-of-record hydrographs (those designated with an asterisk in figures 2-16 and in the description for the period of record), a linear regression was determined. The line is included with the plot of water-level data in the hydrographs. It should be noted that a linear regression on ground-water time-series data is not the most appropriate method for illustrating possible trends. Linear regression analysis assumes normally distributed data, but ground-water data is typically nonnormal and a nonparametric test provides better results. Linear regression was used for these analyses because the intent of the regression is to supply a graphical aid to illustrate the trend in water levels. If it is necessary to perform a rigorous trend analyses on the data, a different type of statistical analysis should be used.

On the graphs, periods of 6 months or longer of missing data are represented by one of three ways. A solid line is used for all tape-down derived values. A dashed line is used for all recorder derived values. Where a tape-down value occurs as the initial point followed by 5 or more years hiatus to the next value, an "x" is used to represent the initial value with no connecting line. Tape-down derived values will *a priori* have gaps between values, but a record is maintained, nevertheless; hence, the solid lines between points of 1 to 5 years in duration. Gaps in a recorder record may occur due to either a malfunction of the recorder or for a period of time when no record was maintained—this report does not distinguish between the two. If 5 or more years elapse between

an initial measurement and the others, an "x" for an initial tape-down measurement is used with no connecting line between this initial value and the following data. This is done so no erroneous conclusion will be made regarding possible trends.

Monthly mean values of ground-water levels were determined from daily values of water levels measured by the SRWMD and the USGS. The daily water-level values obtained from the SRWMD data base for wells with recorders reflect water levels measured at 12:00 p.m. for that day. Daily water-level values obtained from the USGS data base for wells with recorders reflect the highest value measured for that day. Although there is inconsistency between the SRWMD and the USGS in the way daily values are determined, the differences in values (when comparing values determined by the two methods) are minor, because daily fluctuations in water levels in wells are typically small relative to changes that might occur seasonally or during the period of record.

Monthly mean ground-water levels were also determined for wells without continuous recorders. In wells where instantaneous measurements were made, all water levels measured in a particular month were used to compute the mean for that month. If only one water-level measurement was made in a particular month, that value became the mean for that month.

Graphs showing maximum, minimum, and mean of monthly mean water levels 5 or more years of record were derived from the mean water level computed for each month. For example, all the mean values for a particular month were assembled in a data set. From these monthly values, a maximum and minimum value was selected and a mean value was determined. This type of graph is used to show both the seasonal variations in water levels and extremes which have been encountered during the period of record. The relation of present water levels to long-term conditions can be determined from these statistics. These maximum and minimum values are not necessarily those listed in the extreme values heading.

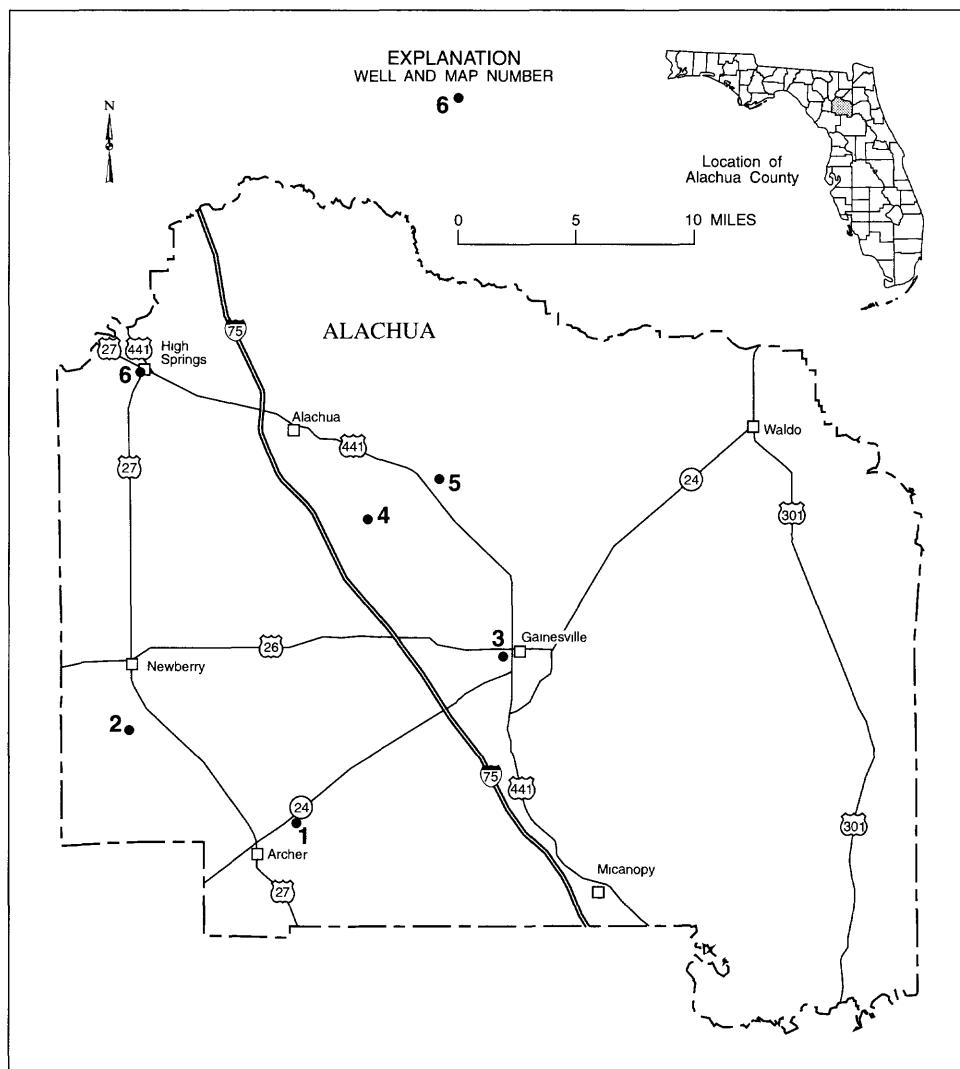

Frequency hydrographs of daily mean ground-water levels show the percentage of time that indicated values of mean ground-water levels were equaled or exceeded in wells with 5 or more years of data. For example, if a ground-water level of 10 ft corresponds to a value of 25 for the percent of time that the indicated value is equaled or exceeded, this means that a mean elevation of 10 ft was equaled or

exceeded 25 percent of the entire period of record. Ground-water level duration frequency hydrographs are often used to obtain a general idea of long-term fluctuations in the ground-water levels. Frequency hydrographs may also be used to estimate the percentage of time that the ground-water level in the area adjacent to a well is depressed due to drought or heavy consumption, or elevated due to heavier than normal rainfall. An important limitation of frequency hydrographs is that no information is provided as to whether the values are consecutive or widely scattered in time.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

WELL CHARACTERISTICS.--Casing diameter 6 in., Casing depth 283 ft., Total depth 720 ft.

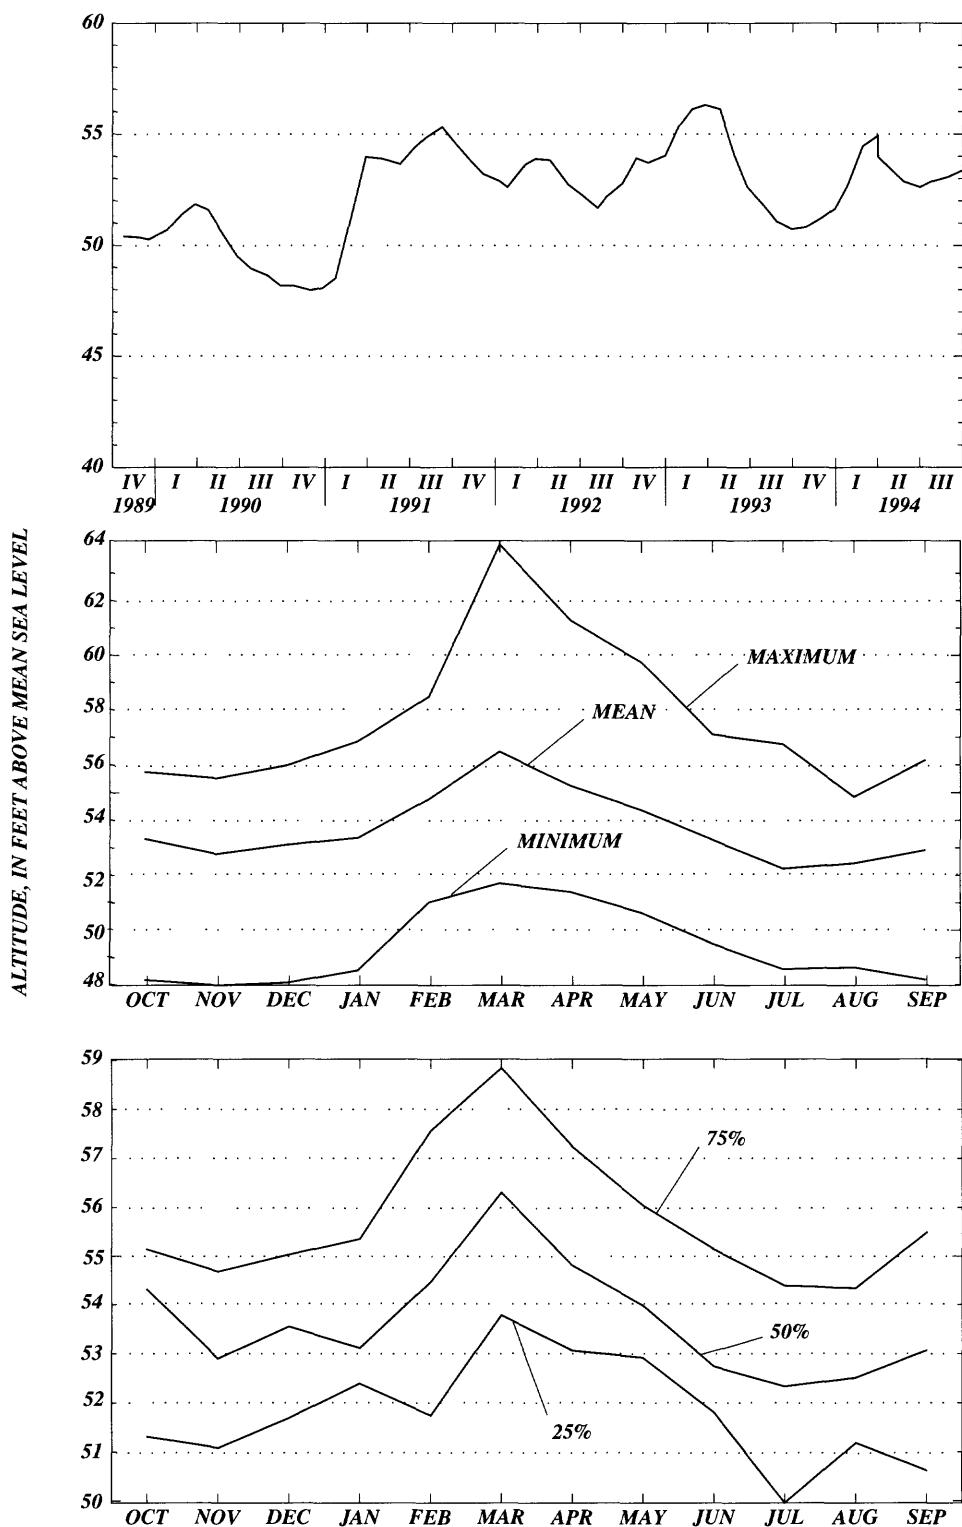

INSTRUMENTATION.--Elevation of Measuring Point 159.98 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--03-01-1965 to 09-30-1994. †

EXTREME VALUES.--Maximum observed, 64.05 ft. (03-01-1965); minimum observed, 47.97 ft. (11-30-1990).

Baker County

WELL NUMBER.--301635082234085. USGS - ONF 8A. -021934001.

LOCATION.--Lat $30^{\circ}16'35''$, long $82^{\circ}23'40''$, Hydrologic Unit Code 03070204.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

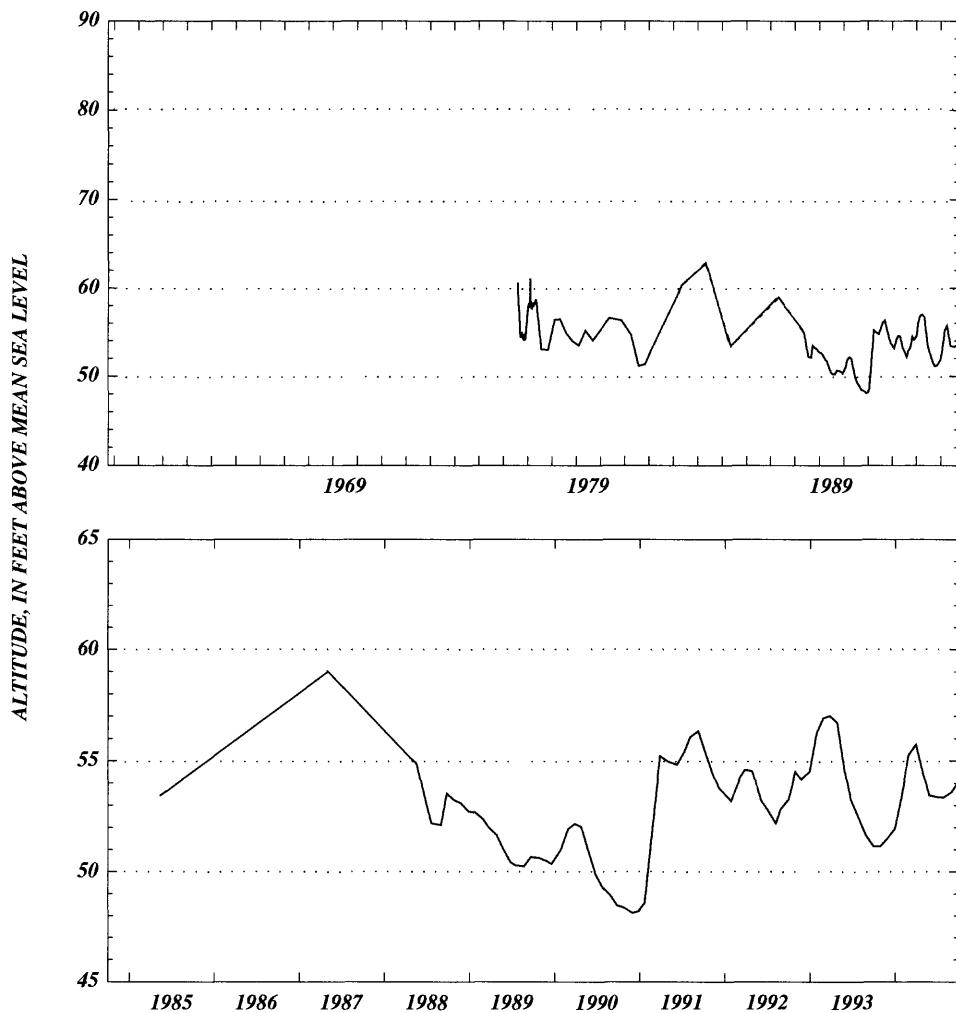

WELL CHARACTERISTICS.--Casing diameter 4 in., Casing depth 213 ft., Total depth 238 ft.

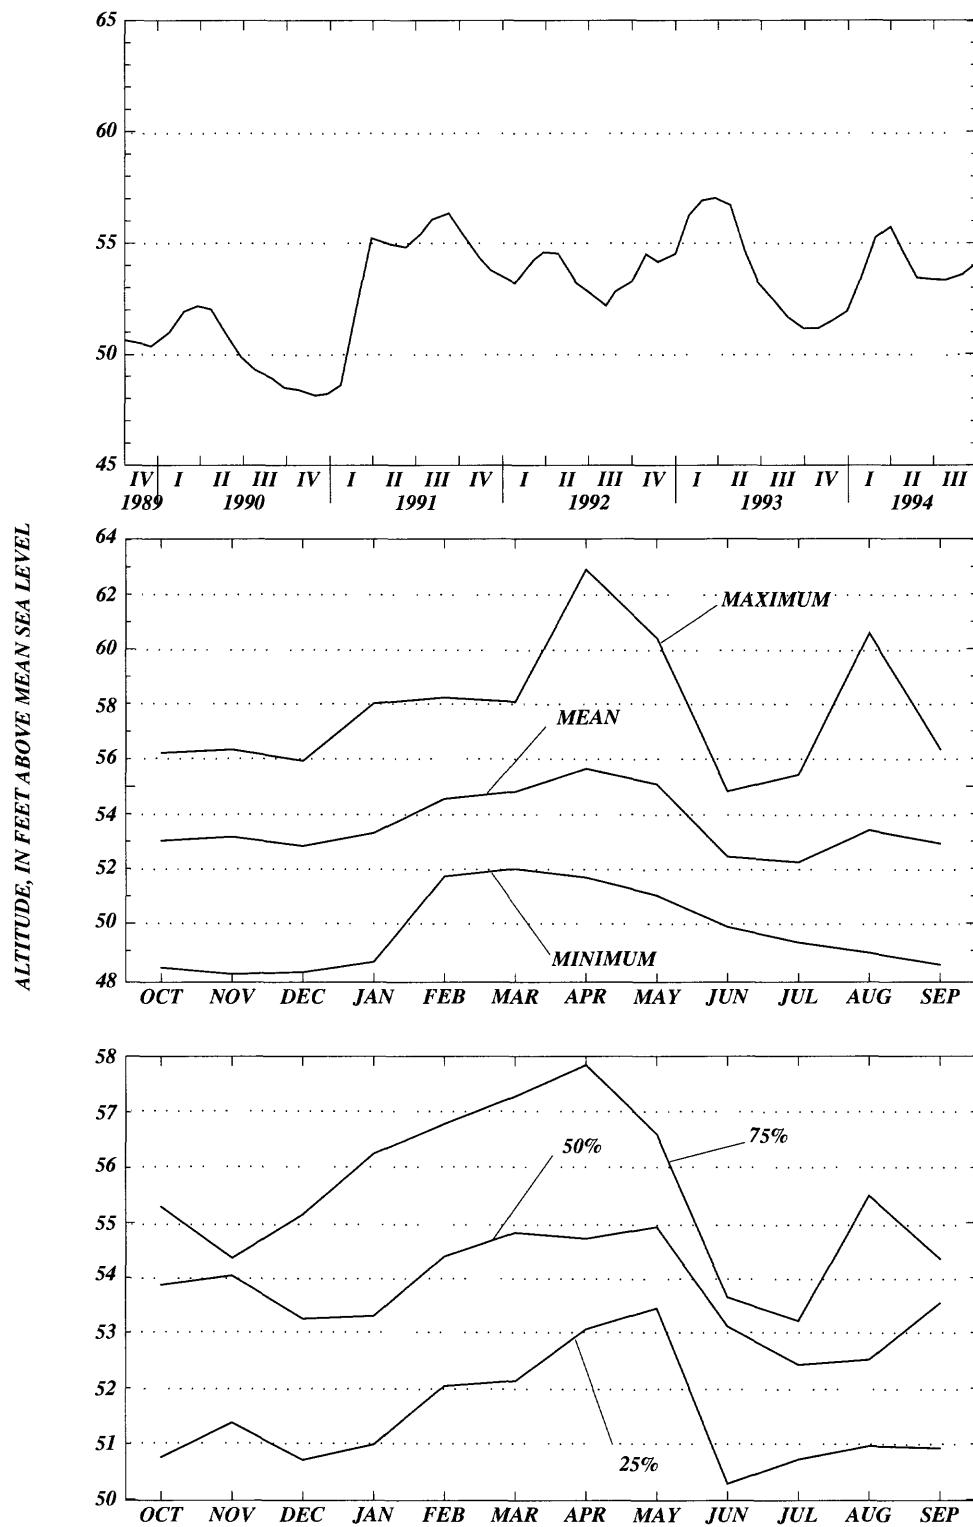

INSTRUMENTATION.--One measurement 08-01-1976; recorder from 09-13-1976 to 03-26-1977, miscellaneous 03-27-1977 to 09-30-1994. Elevation of Measuring Point 155.57 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--08-01-1976 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 62.90 ft. (04-23-1984); minimum observed 48.13, ft. (11-30-1990).

Baker County

WELL NUMBER.--301702082271585. USGS - ONF 7A. -021930001.

LOCATION.--Lat $30^{\circ}17'02''$, long $82^{\circ}27'14''$, Hydrologic Unit Code 03070204.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

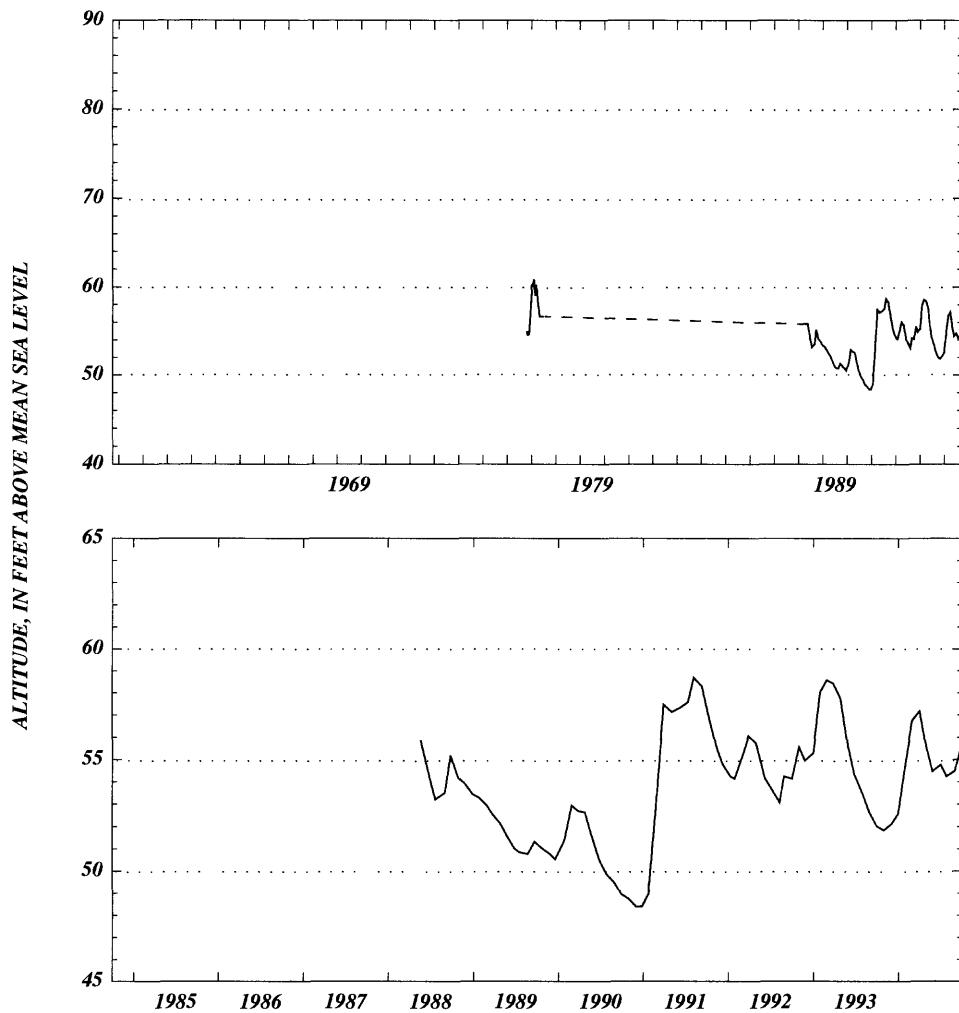

WELL CHARACTERISTICS.--Casing diameter 4 in., Casing Depth 178 ft., Total depth 184 ft.

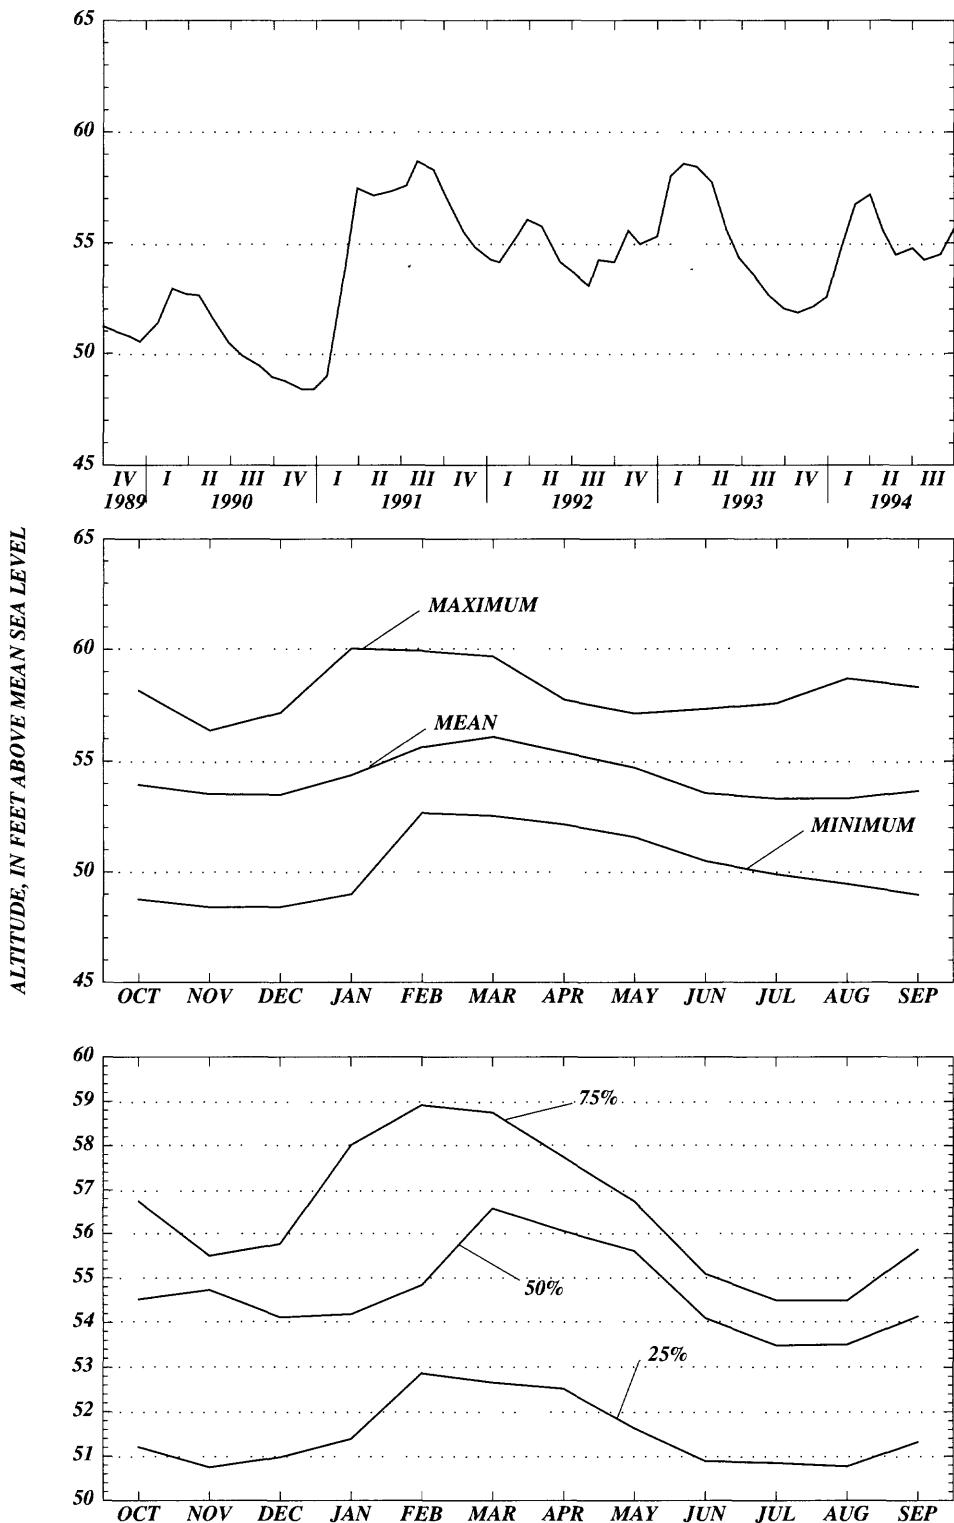

INSTRUMENTATION.--Recorder from 10-21-1976 to 05-05-1977; no record from 05-06-1977 to 05-17-1988; miscellaneous from 05-18-1988 to 09-30-1994. Elevation of Measuring Point 143.48 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--10-21-1976 to 09-30-1994.[†]

EXTREME VALUES.--Maximum, 60.83 ft (02-09-1977); minimum observed, 48.40 ft. (11-30-1990).

Baker County

WELL NUMBER.--302115082232285. USGS - ONF 5A. -021902001.

LOCATION.--Lat 30°21'15", long 82°23'22", Hydrologic Unit Code 03070204.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

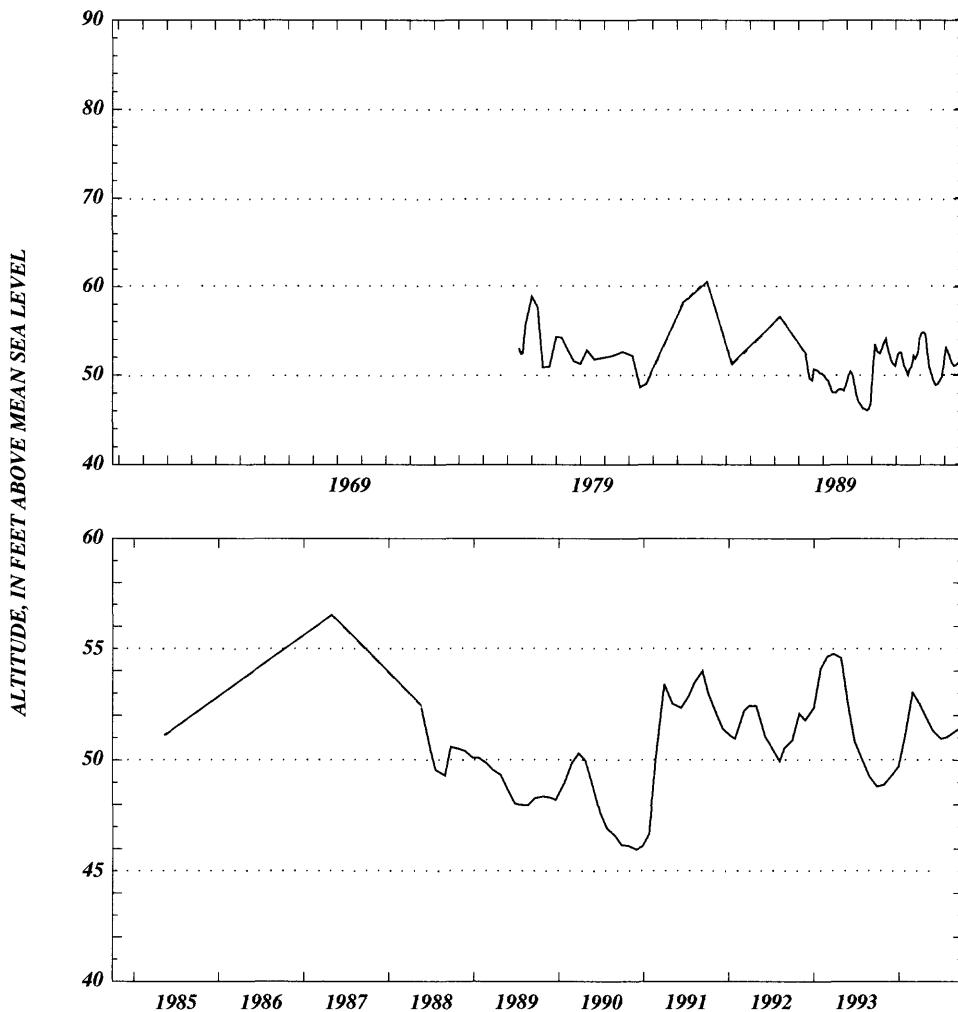

WELL CHARACTERISTICS.--Casing diameter 4 in., Casing depth 270 ft., Total depth 292 ft.

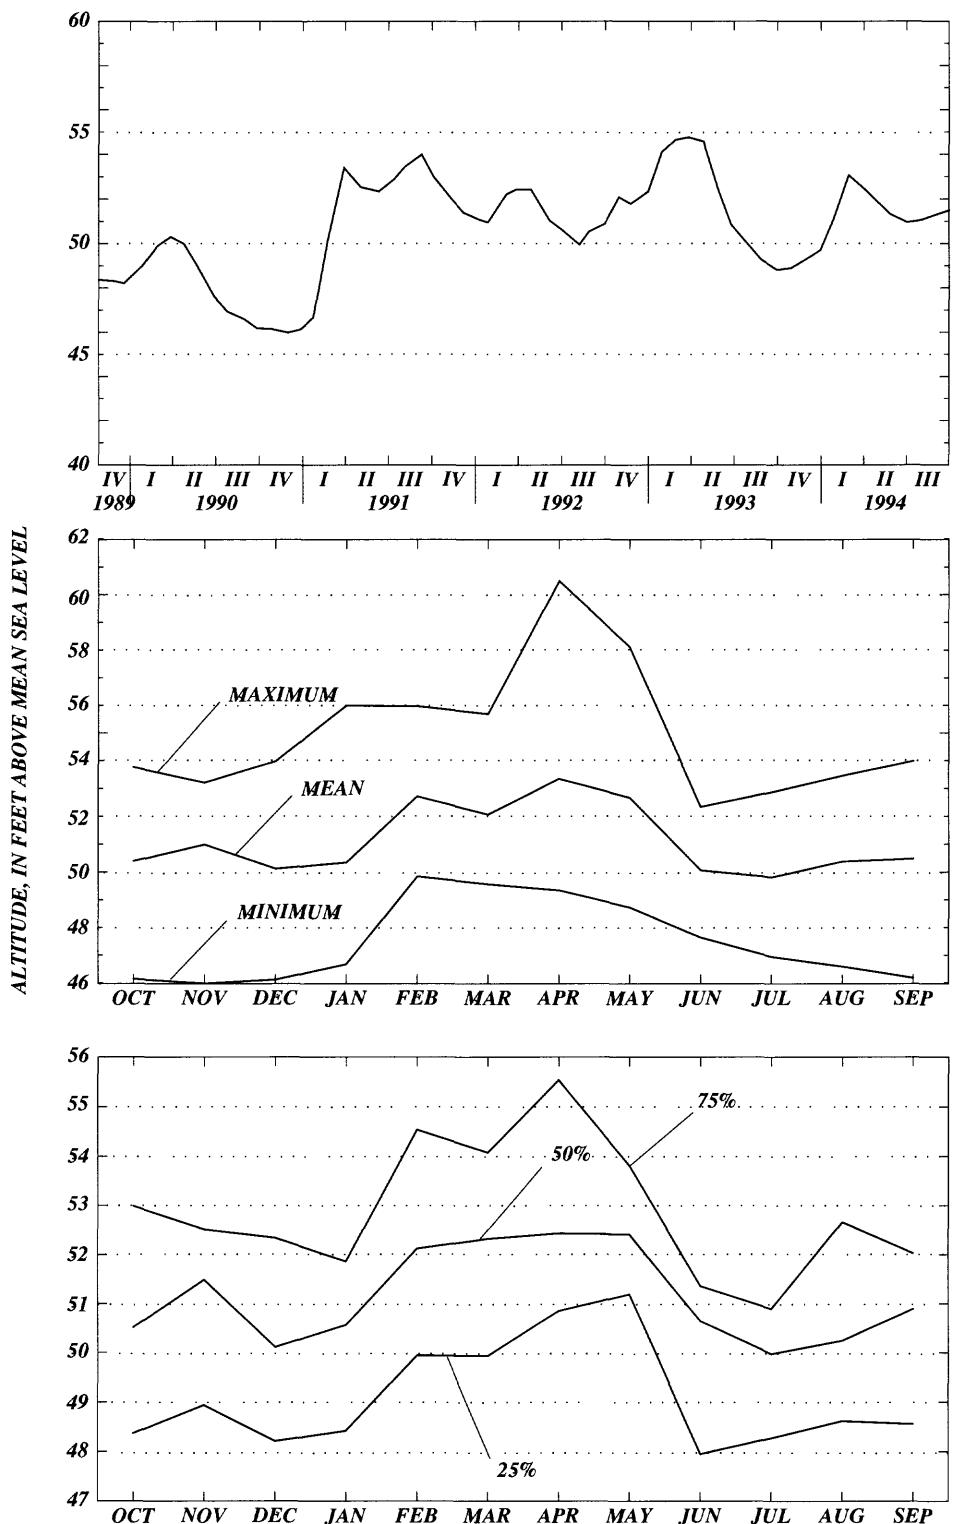

INSTRUMENTATION.--Recorder from 08-03-1976 to 09-30-1976; miscellaneous from 11-01-1976 to 09-30-1994. Elevation of the Measuring Point 134.39ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--08-03-1976 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 60.49 ft. (04-23-1984); minimum observed, 45.98 ft. (11-30-1990).

EXTREME VALUES.--Maximum, 61.43 ft. (03-23-1991); minimum, 48.20 ft. (01-09-1991).

Columbia County

WELL NUMBER.--302052082312485. USGS - ONF 3A. -021805001.

LOCATION.--Lat 30°20'32", long 82°31'43", Hydrologic Unit Code 03110201.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

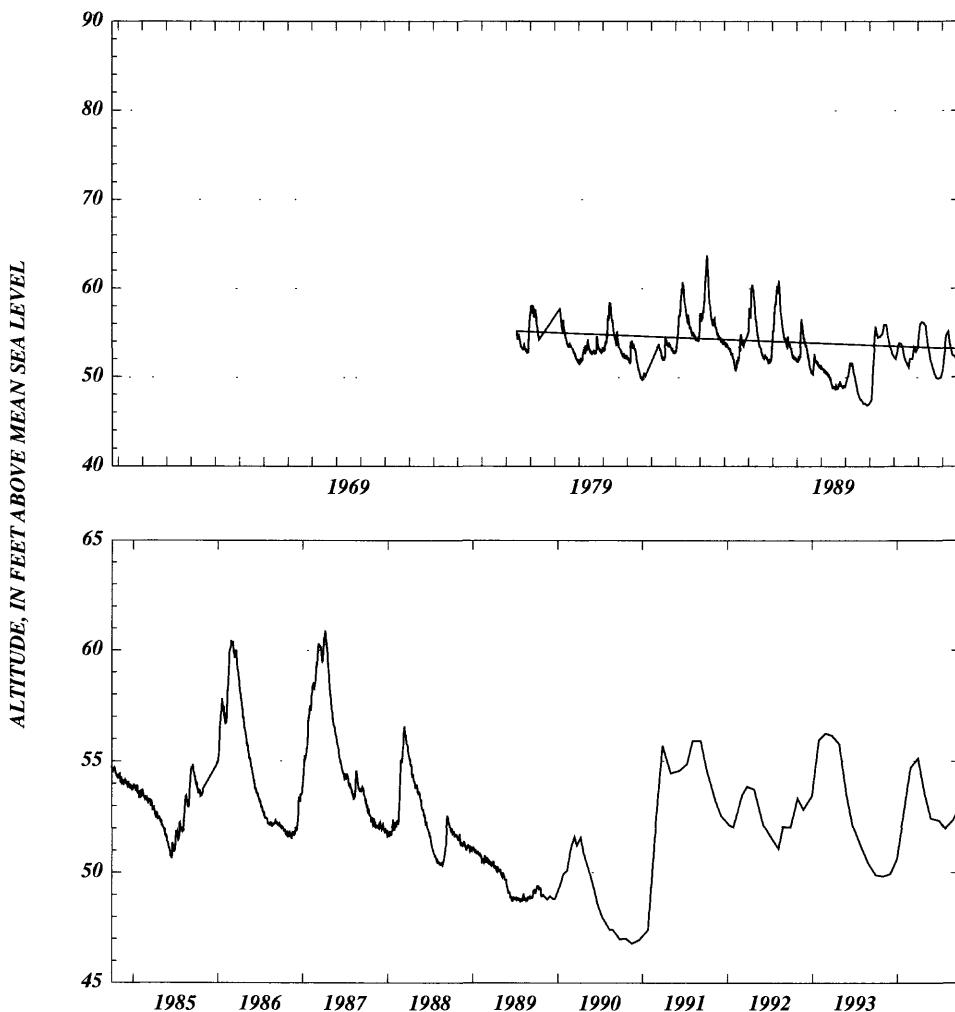

WELL CHARACTERISTICS.--Casing diameter 4 in., Casing depth 195 ft., Total depth 220 ft.

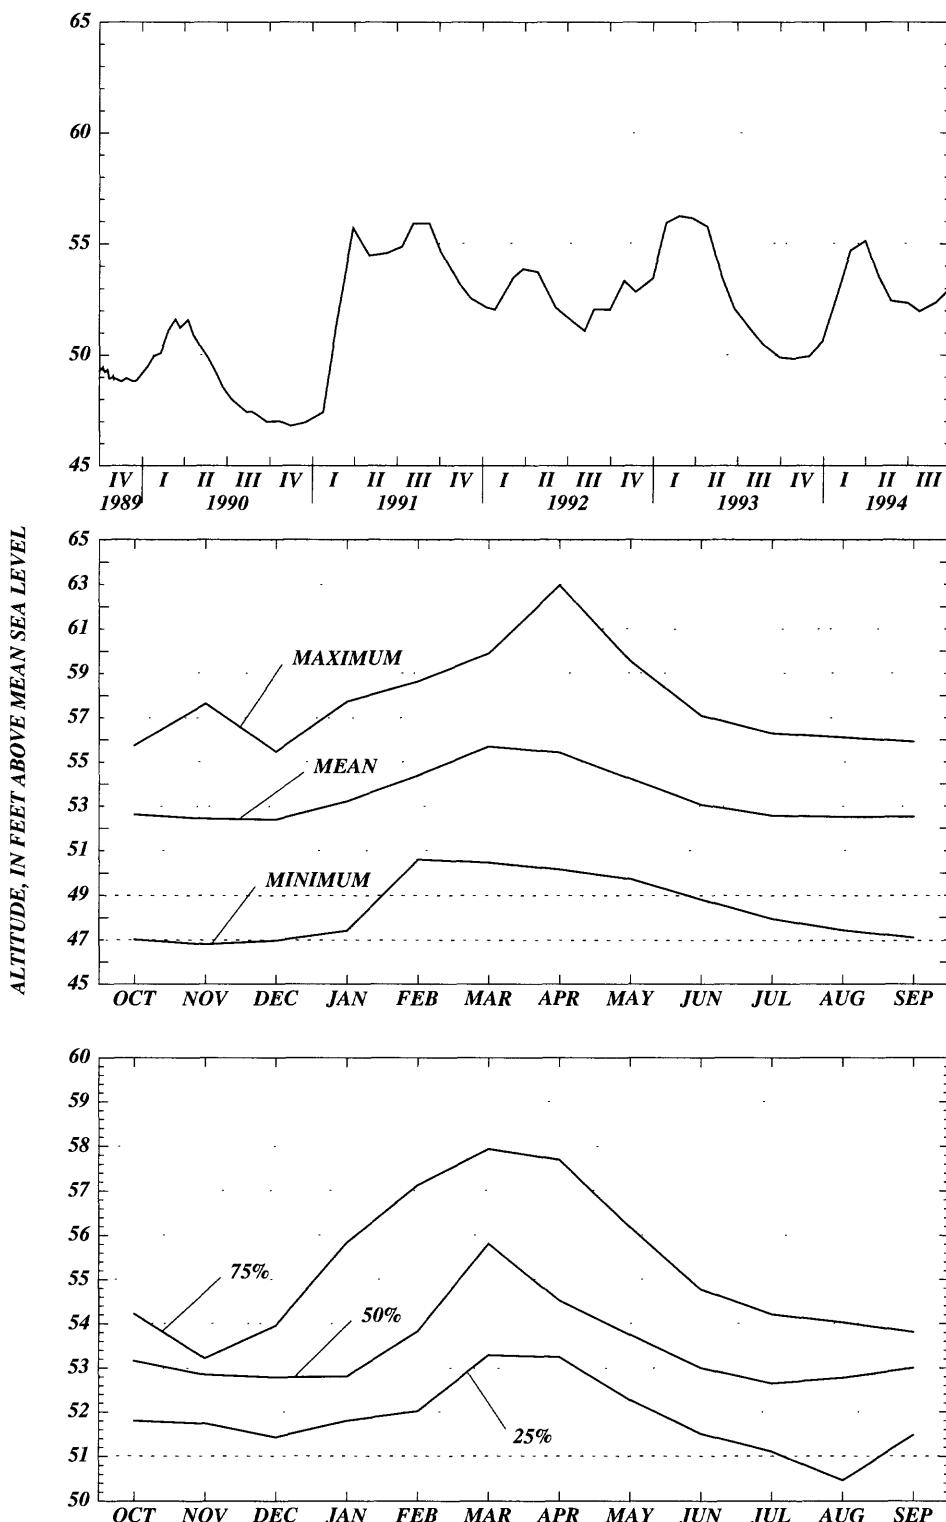

INSTRUMENTATION.--Recorder from 06-10-1976 to 11-02-1989, miscellaneous measurements from 11-17-1989 to 09-30-1994. Elevation of Measuring Point 131.45 ft, NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--06-10-1976 to 09-30-1994. *

EXTREME VALUES.--Maximum, 63.66 ft (04-16-1984); minimum observed, 46.80 ft. (11-16-1990).

Columbia County

WELL NUMBER.--302243082360285. USGS - ONF 1A. -011727001.

LOCATION.--Lat 30°22'41", long 82°36'04", Hydrologic Unit Code 03110201.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

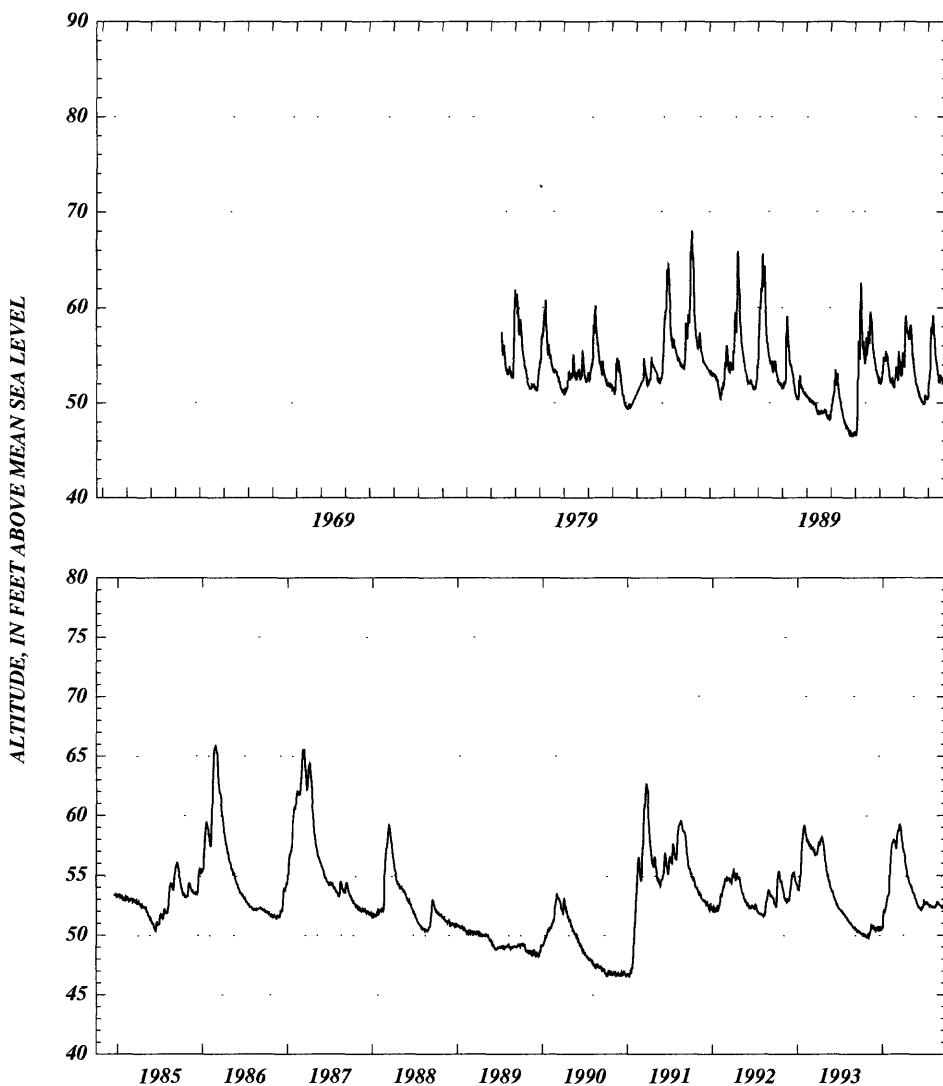

WELL CHARACTERISTICS.--Casing diameter 8 in., Casing depth 192 ft., Total depth 228 ft.

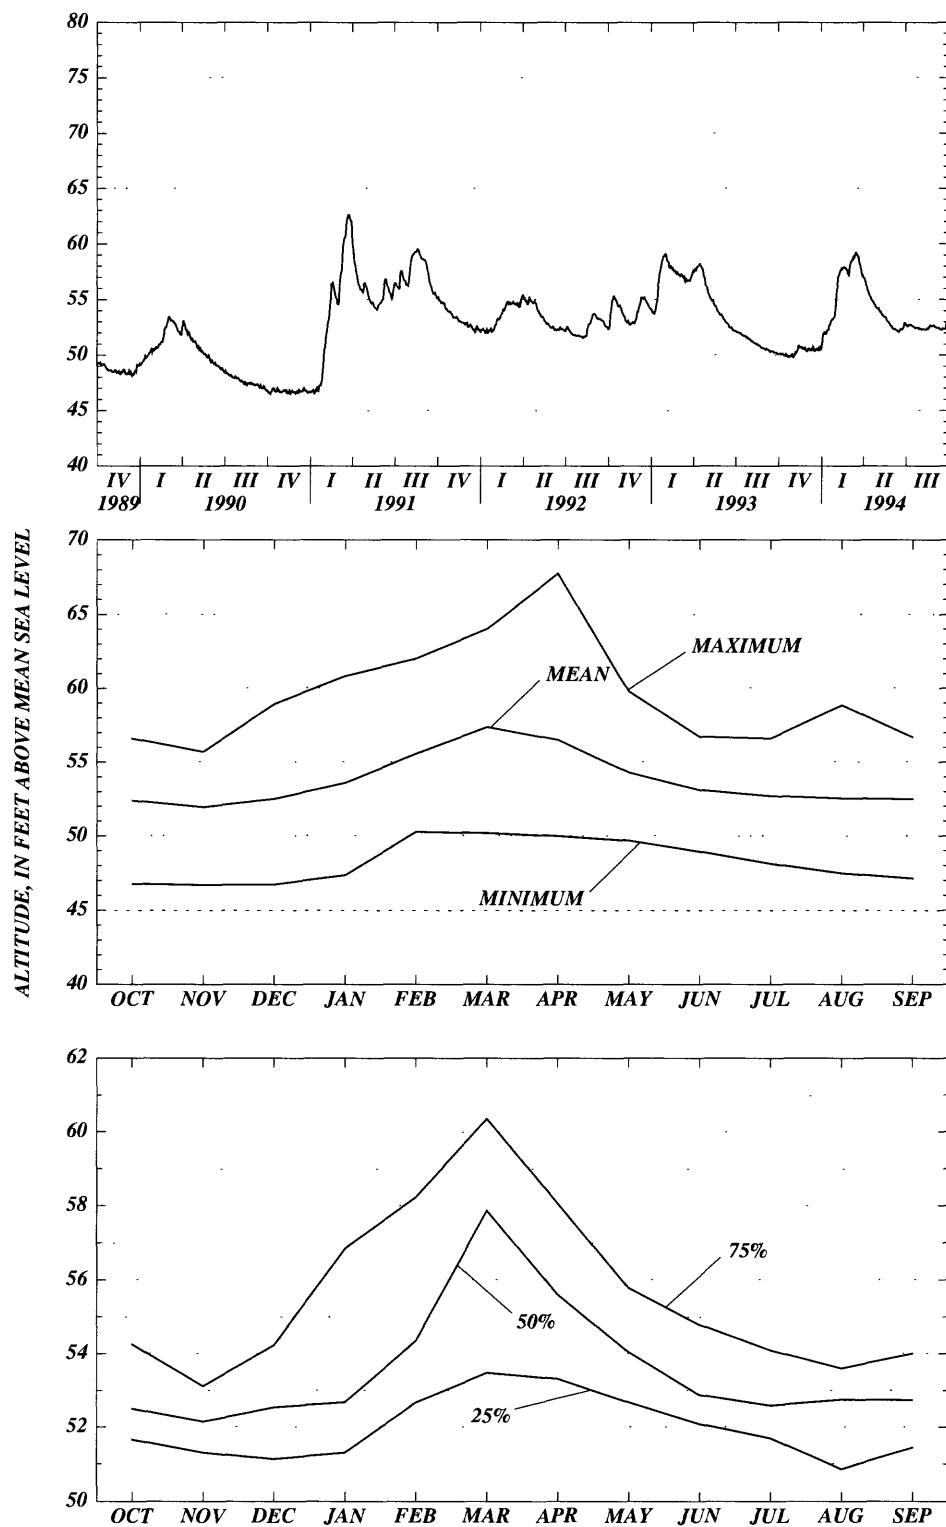

INSTRUMENTATION.--Recorder set to elevation of Measuring Point 122.06 ft, NGVD.

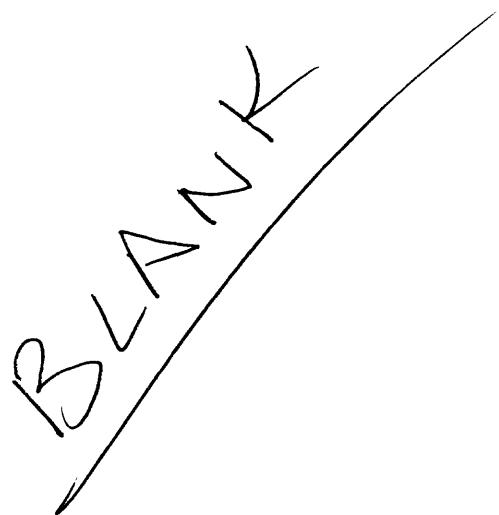

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--06-10-1976 to 09-30-1994.

EXTREME VALUES.--Maximum, 68.03 ft. (04-03-1984); minimum observed, 46.51 ft. (10-07-1990).

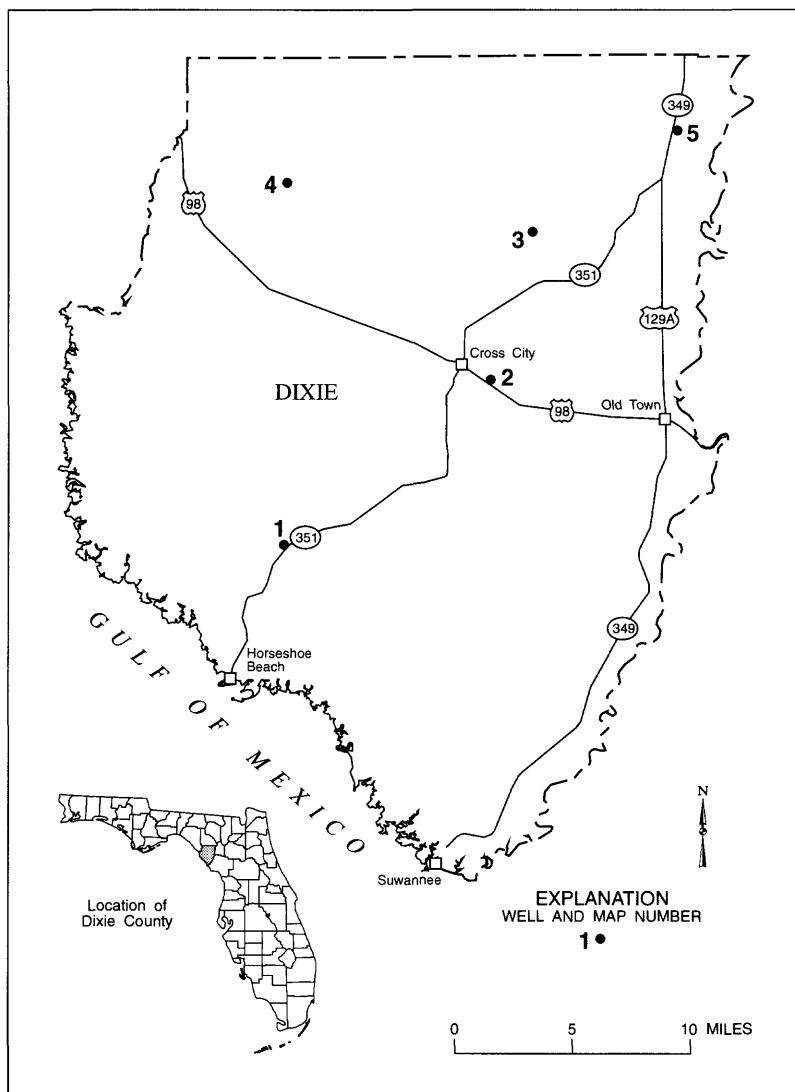

Figure 7. Location of wells in Dixie County.

Dixie County

WELL NUMBER.--293137083143085. DOF - Horseshoe Tower, -111117007.

LOCATION.--Lat 29°31'37", long 83°14'30", Hydrologic Unit 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary System, Geologic Unit 120FLRD.

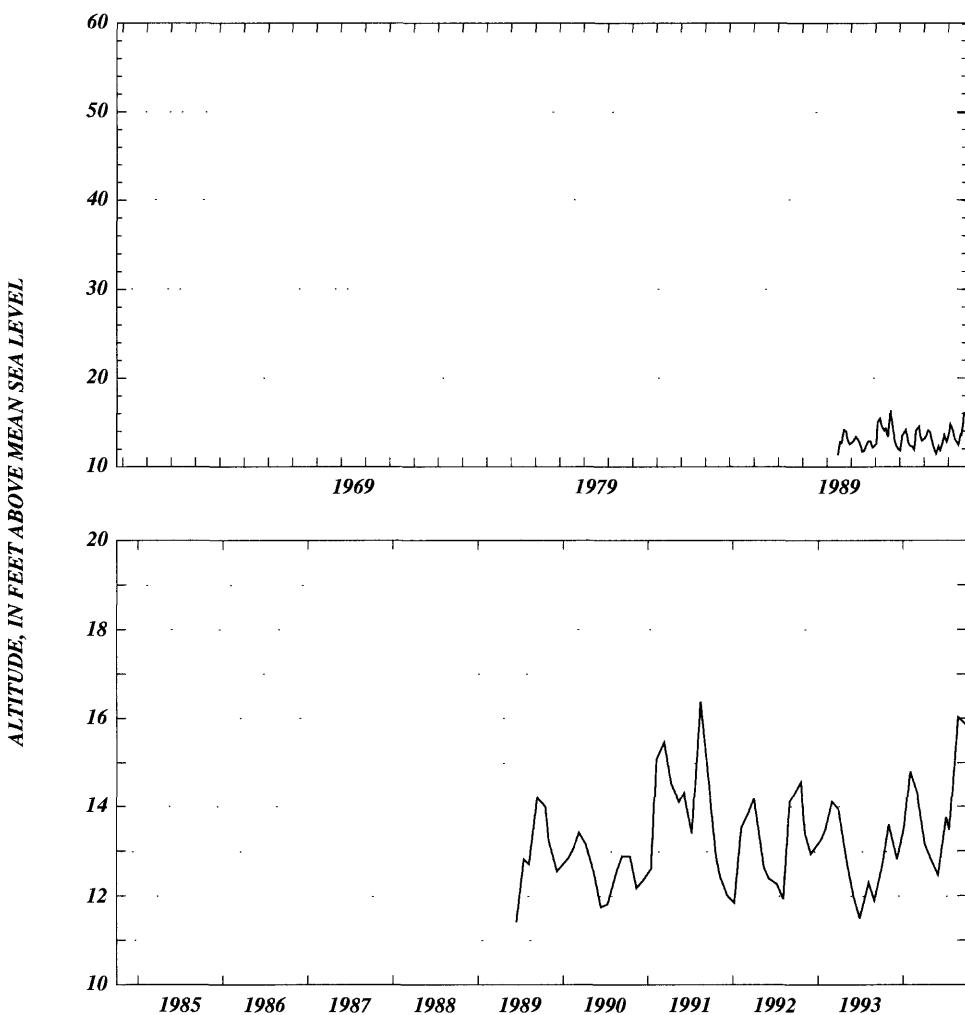

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 6 ft., Total depth 36 ft.

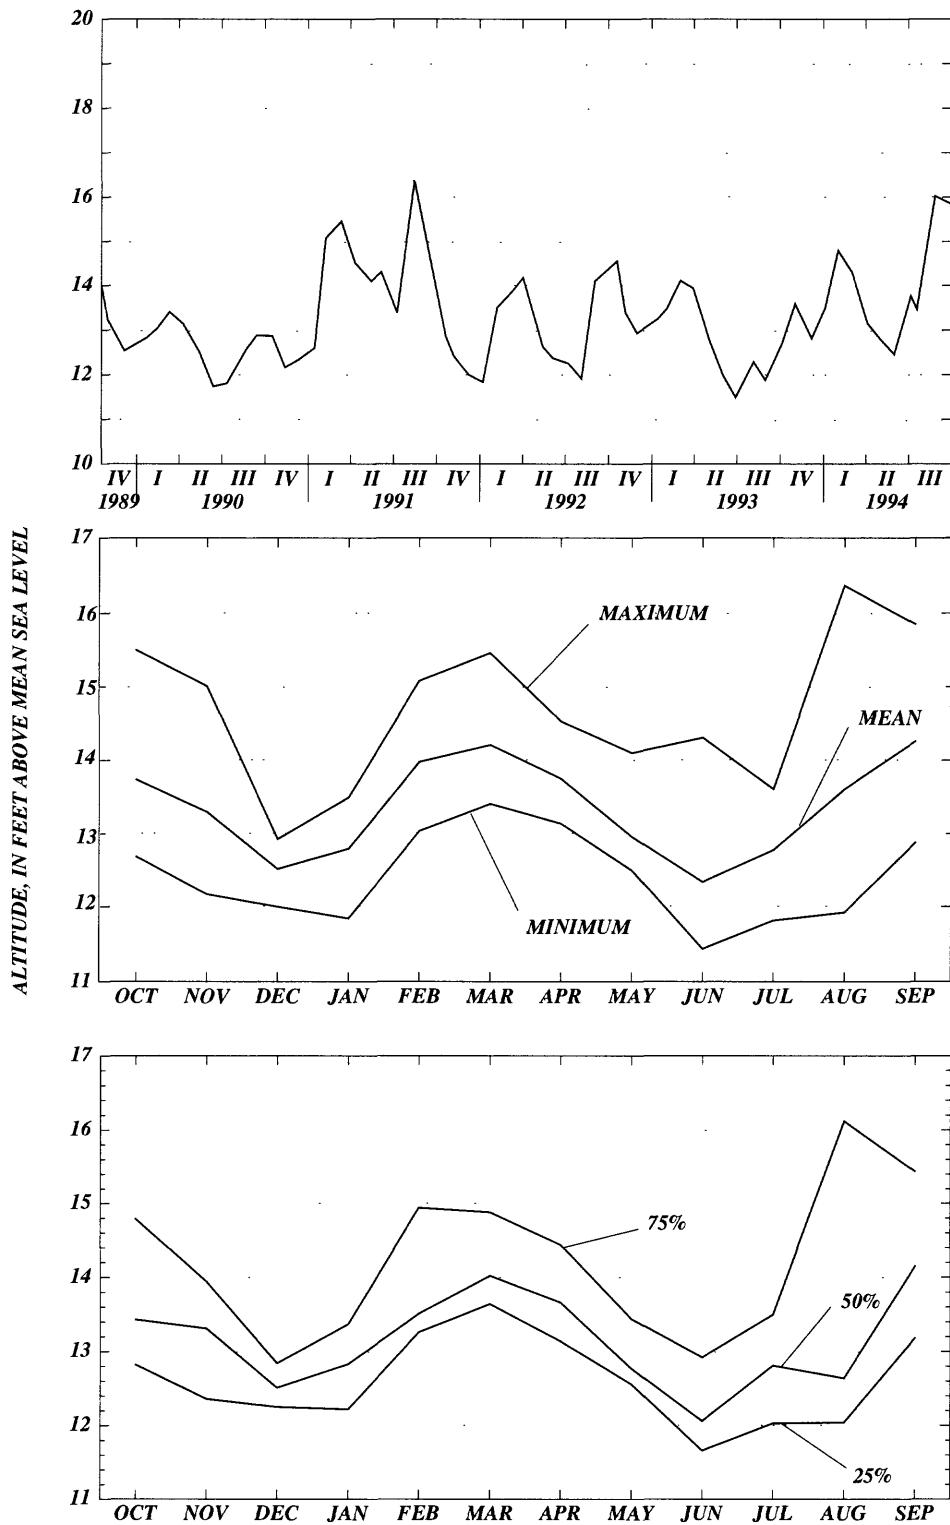

INSTRUMENTATION.--Elevation of Measuring Point 18.43 ft., NGVD.

DATUM.--National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--06-15-1989 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 16.38 ft. (08-15-1991); minimum observed, 11.42 ft. (06-15-1989).

Dixie County

WELL NUMBER.--293731083061885. City of Cross City. -101210001.

LOCATION.--Lat 29°37'31", long 83°06'18", Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

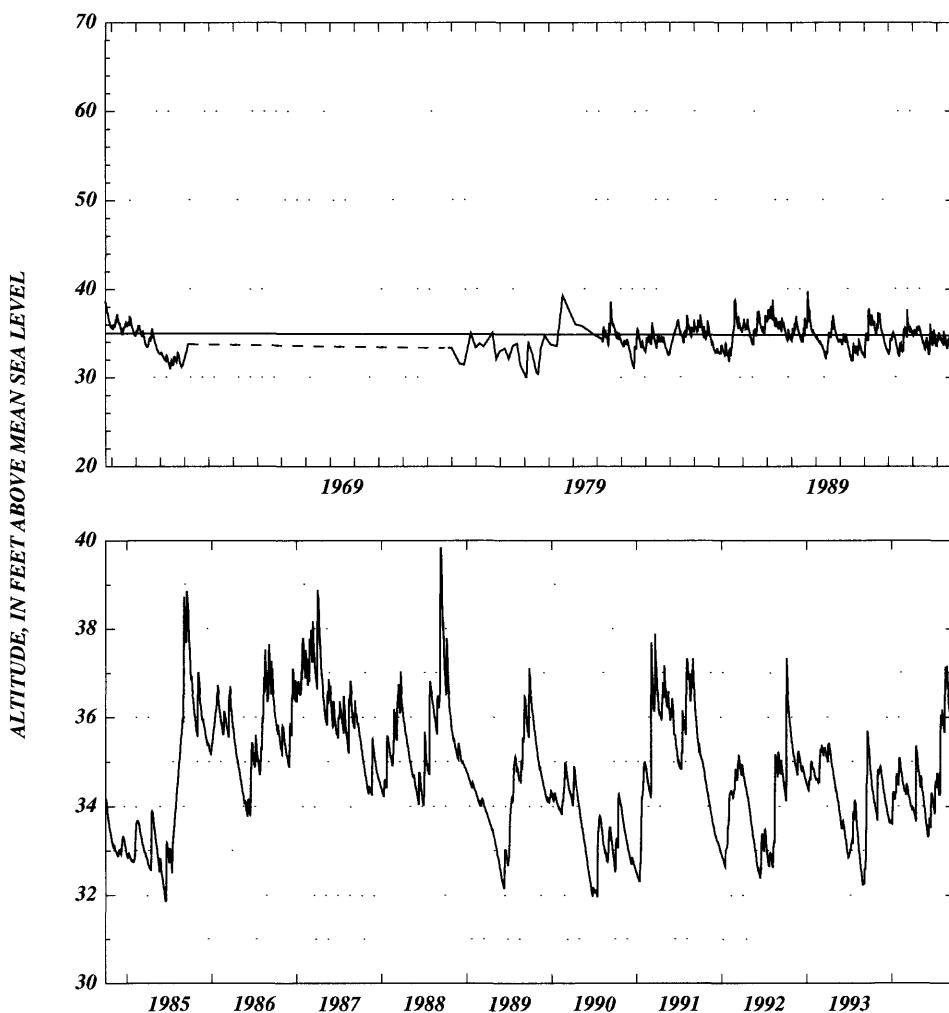

WELL CHARACTERISTICS.--Casing diameter 8 in., Casing depth 106 ft., Total depth 215 ft.

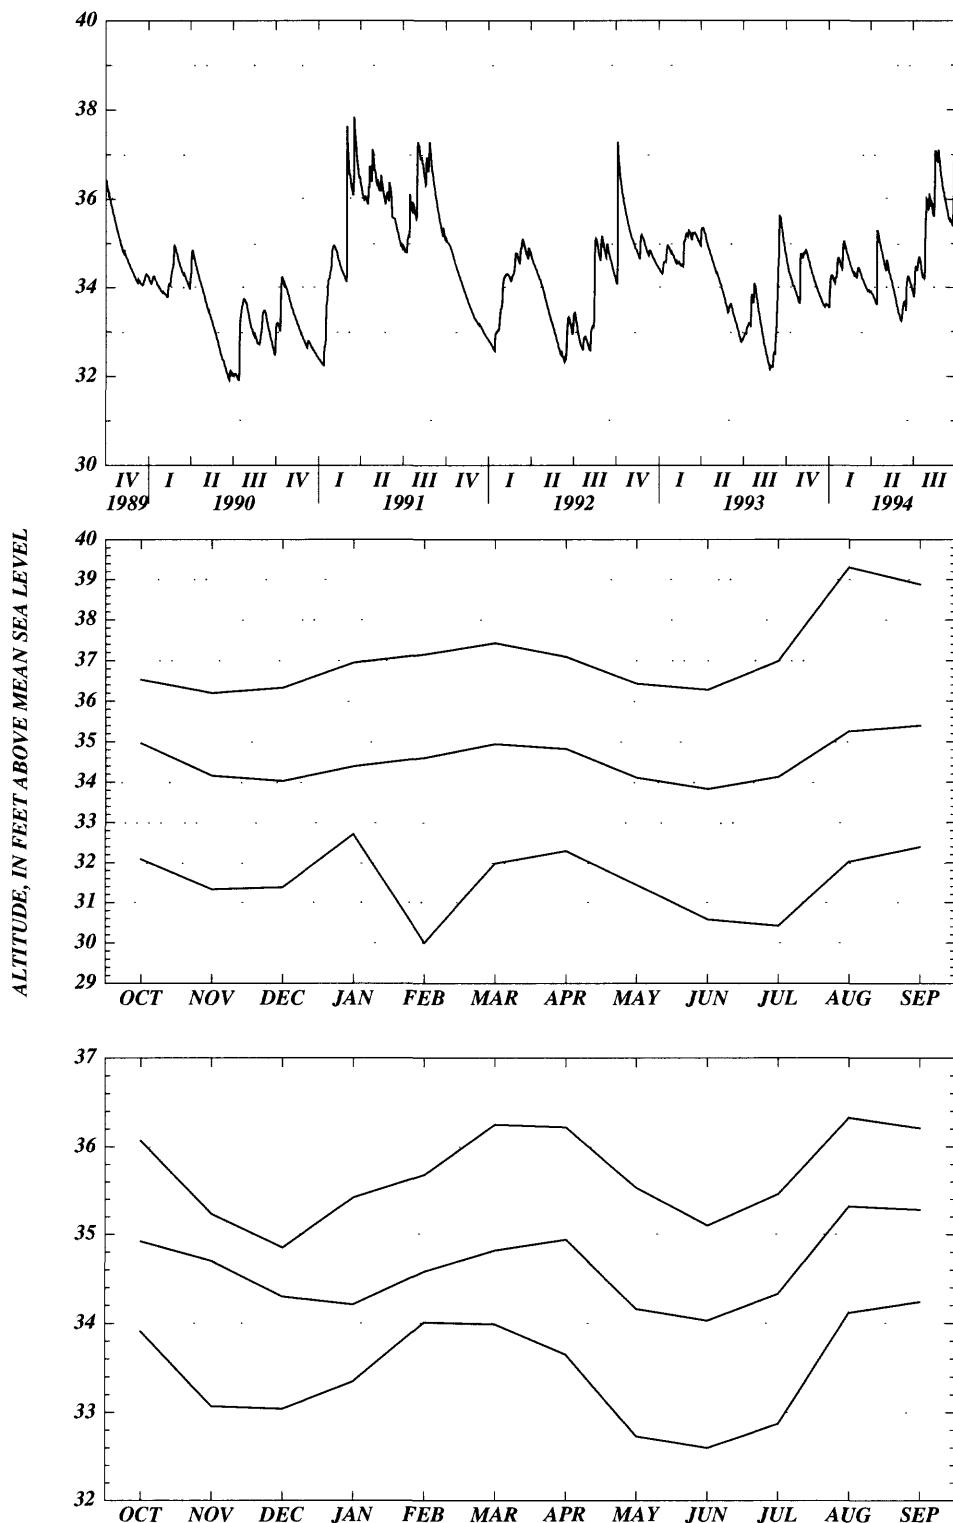

INSTRUMENTATION.--Recorder from 06-20-1957 to 02-28-1063; no record from 03-01-1963 to 10-12-1974; miscellaneous measurements from 01-03-1974 to 003-19-1980; recorder from 03-20-1980 to 09-30-1994. Elevation of the Measuring Point, 43.90 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--06-20-1957 to 09-30-1994. *†

EXTREME VALUES.--Maximum, 39.80 ft. (09-10-1988); minimum, 30.00 ft. (08-18-1977).

LOCATION.--Lat $30^{\circ}35'10''$, long $83^{\circ}05'49''$, Hydrologic Unit Code 03110205.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

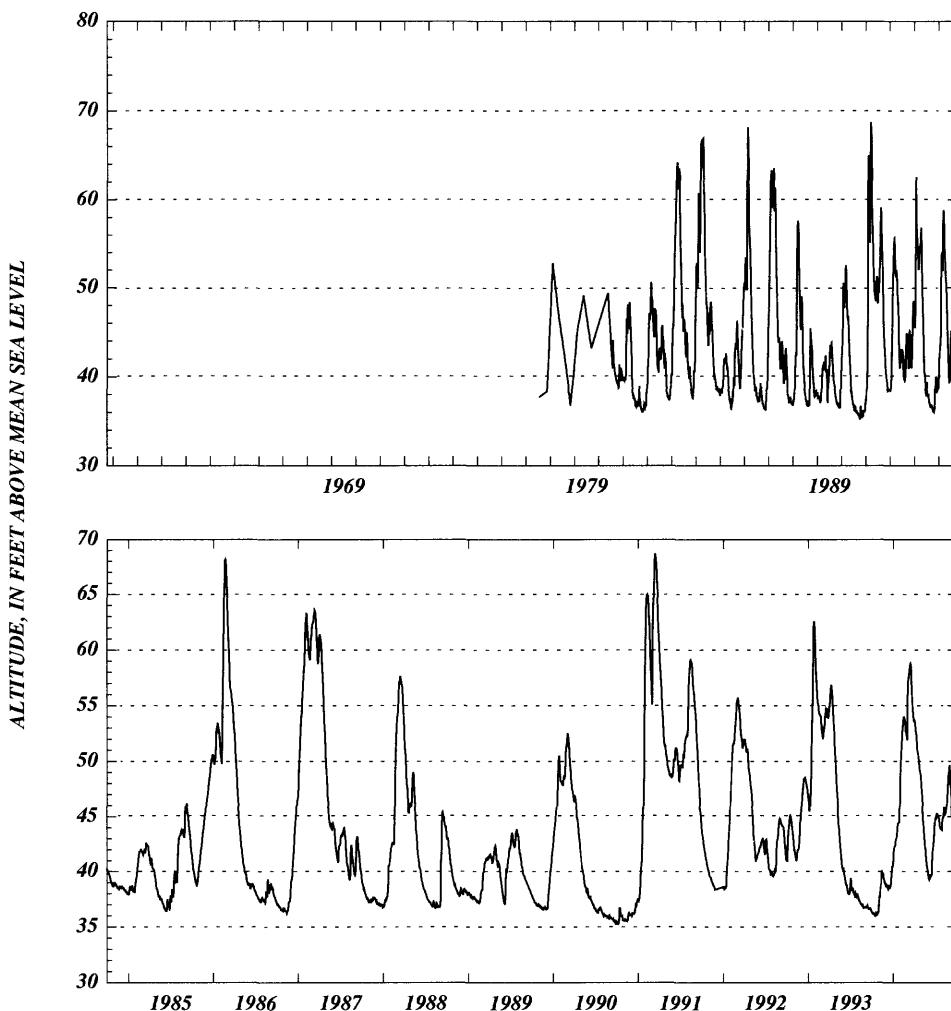

WELL CHARACTERISTICS.--Casing diameter 10 in., Casing depth 153 ft., Total depth 188 ft.

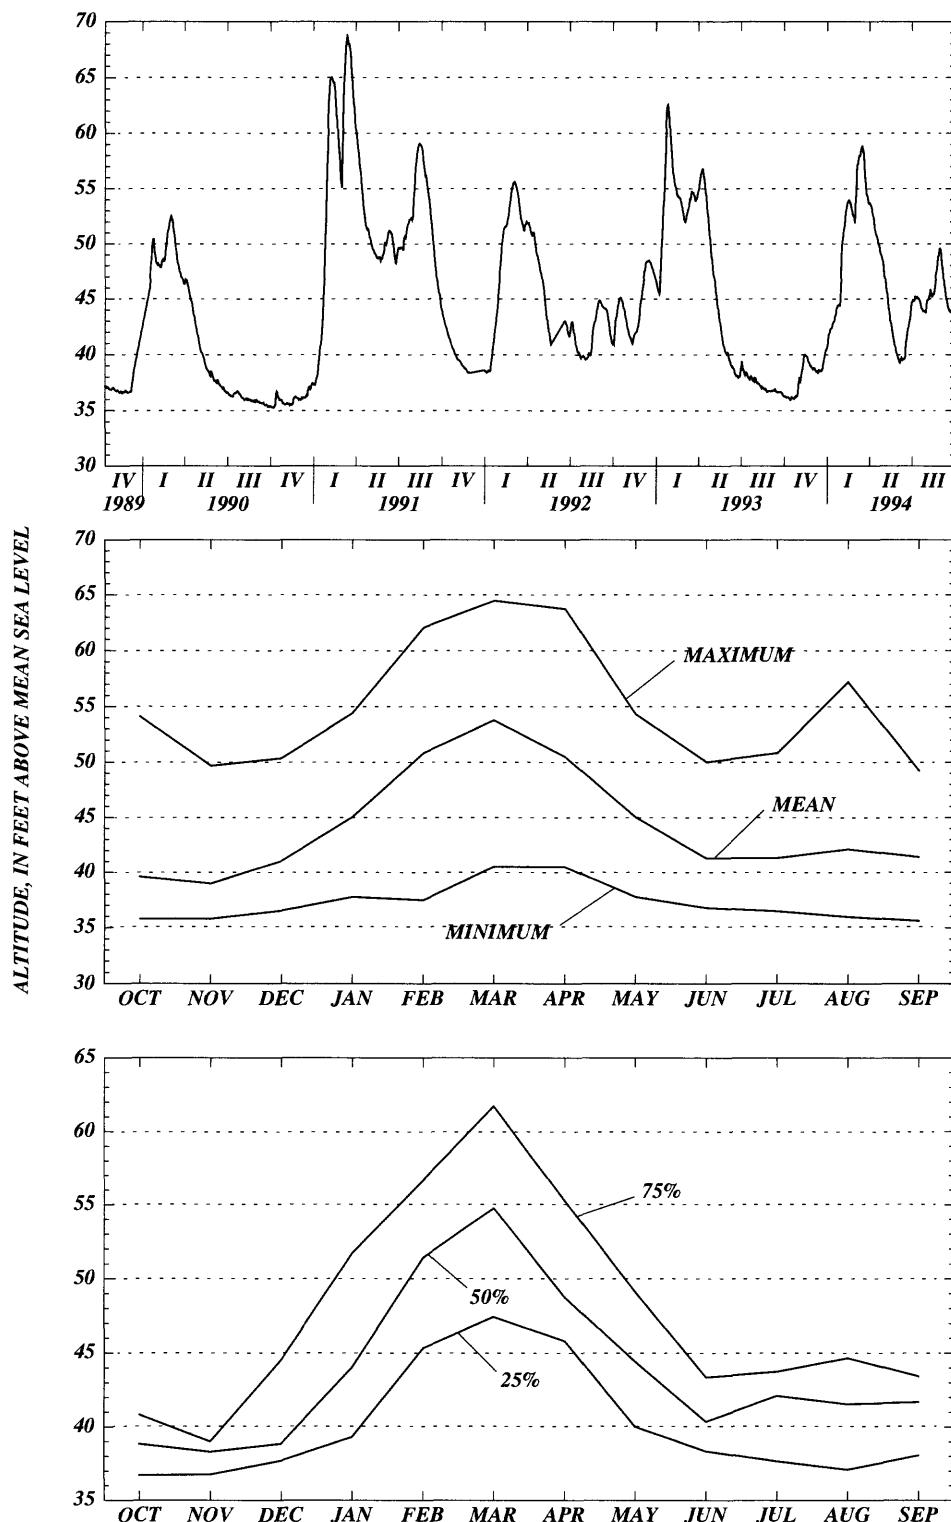

INSTRUMENTATION.--Miscellaneous from 07-26-1977 to 07-11-1980;then recorder, set to elevation of Measuring Point, 155.56 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--07-26-1977 to 09-30-1994.

EXTREME VALUES.--Maximum, 68.72 ft. (03-13-1991); minimum, 35.26 ft. (10-07-1990.)

Hamilton County

WELL NUMBER.--303622083050685. Ben Bates. +021202001.

LOCATION.--Lat 30°36'22", long 83°05'06", Hydrologic Unit Code 03110202.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

WELL CHARACTERISTICS.--Casing diameter 10 in., Casing depth 61 ft., Total depth 273 ft.

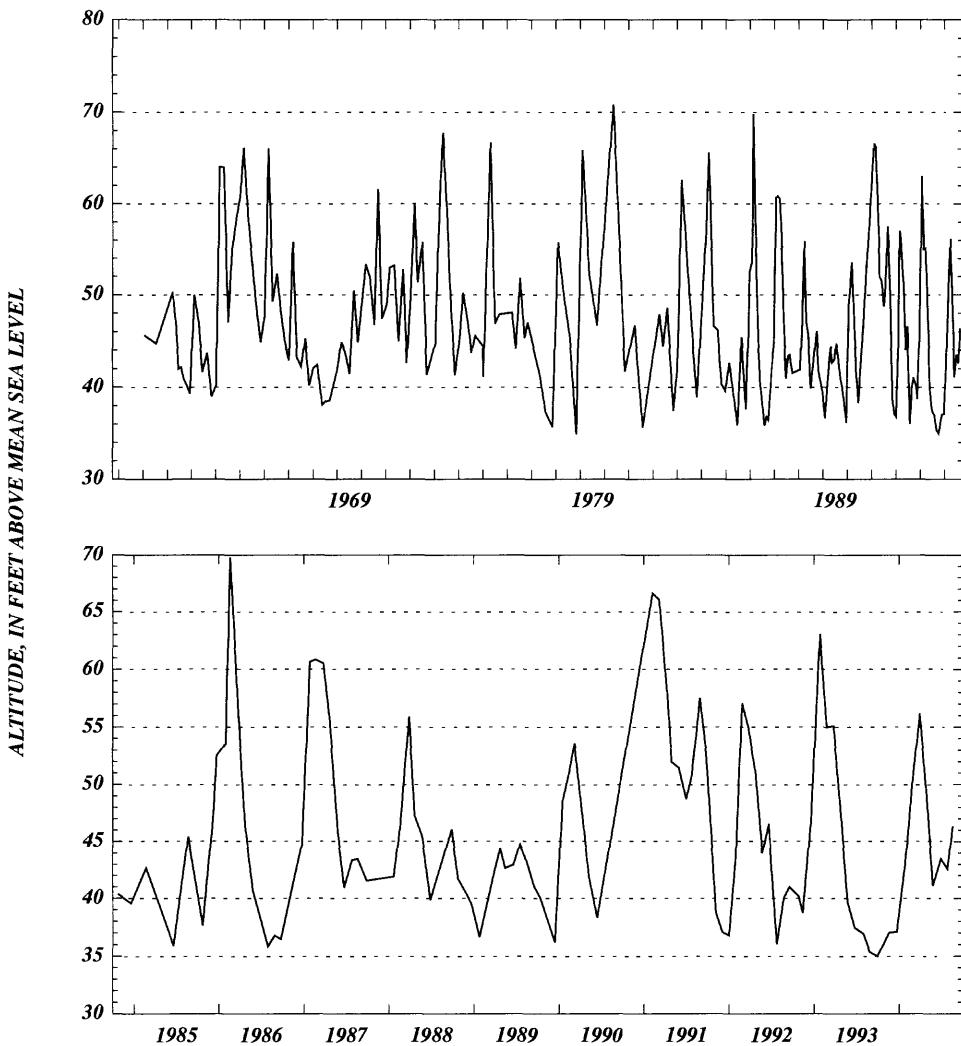

INSTRUMENTATION.--Elevation of Measuring Point 150.70 ft., NGVD.

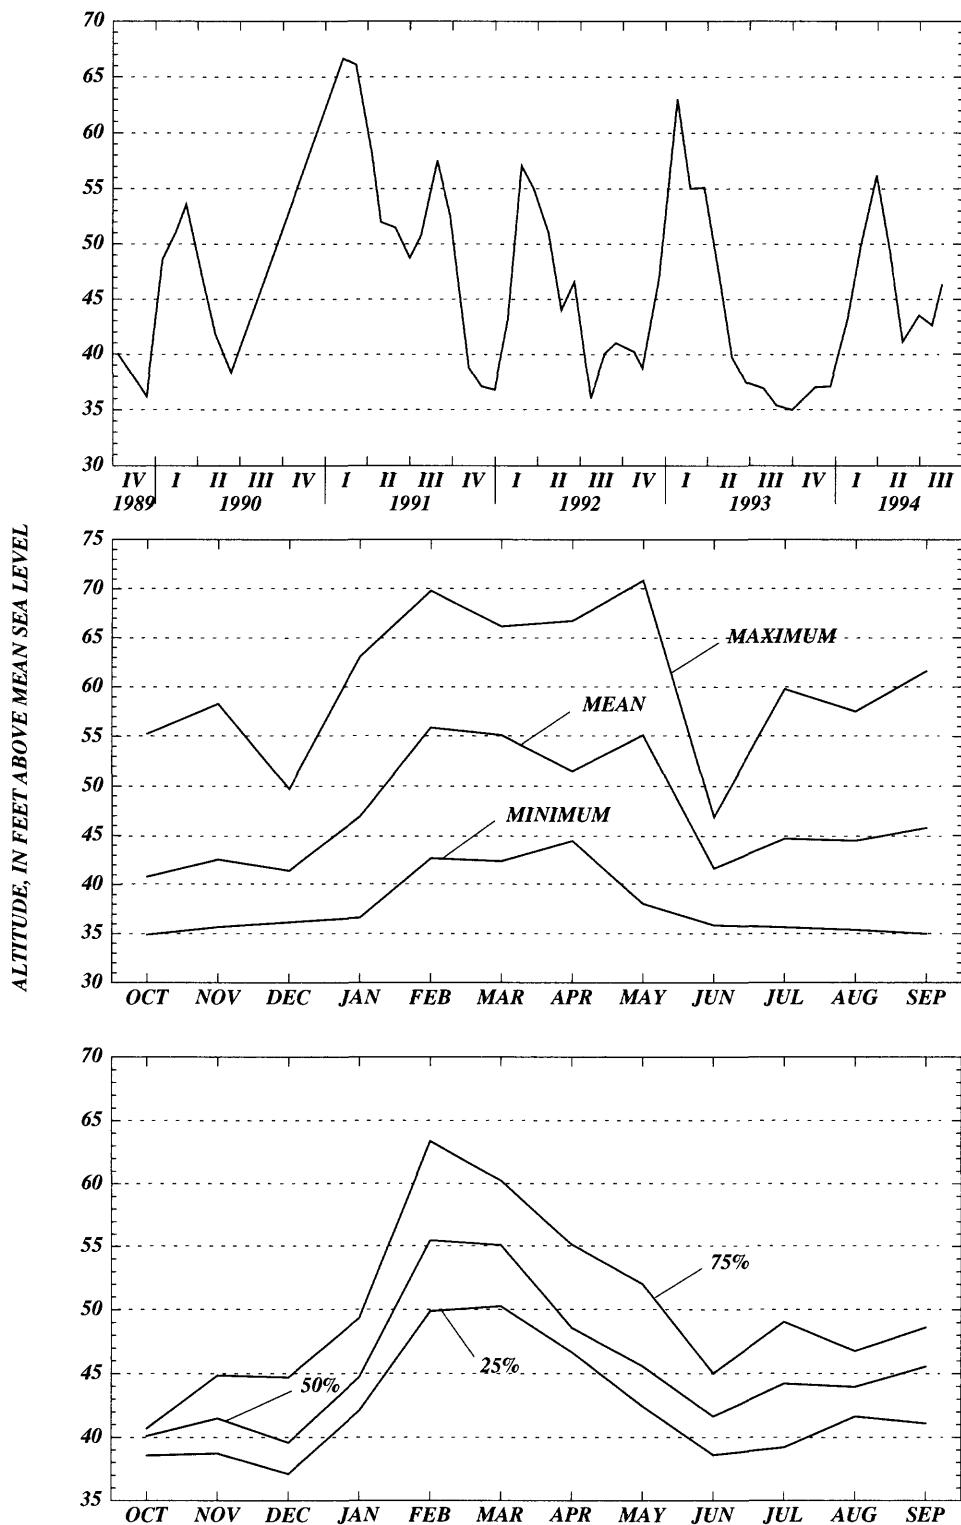

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--01-24-1961 to 09-30-1994.

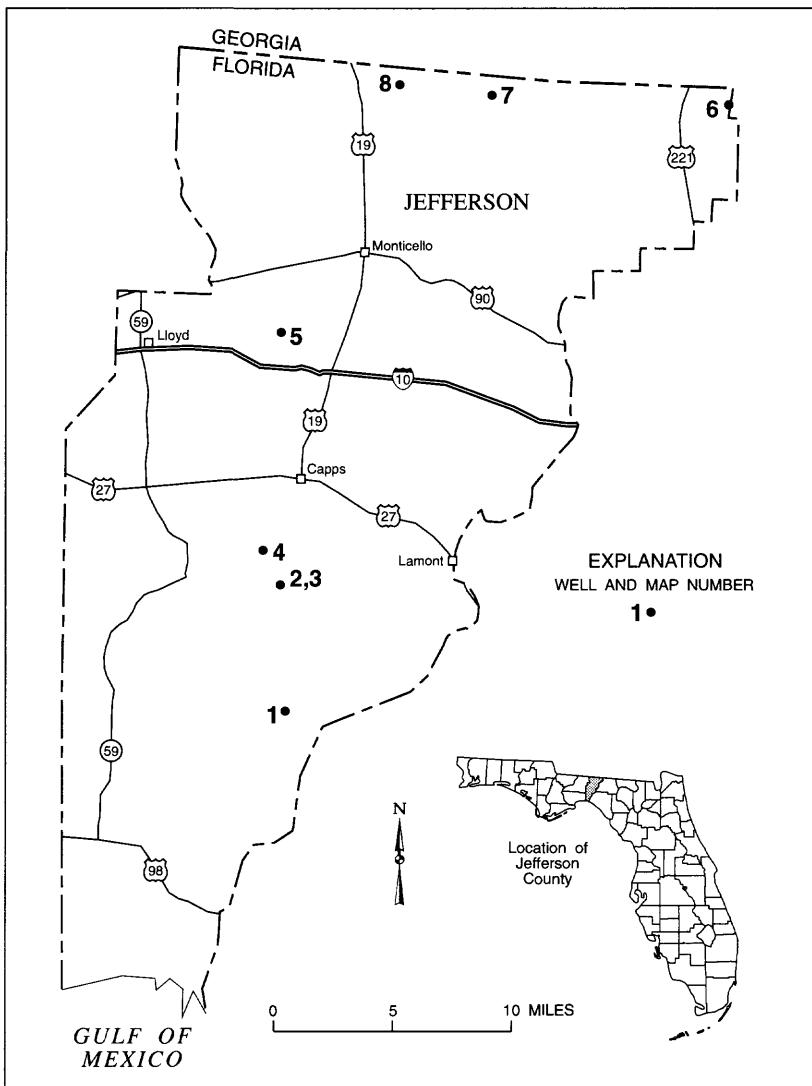

EXTREME VALUES.--Maximum observed, 70.85 ft. (05-16-1980); minimum observed, 34.91 ft.

(10-31-1978). Water level in the well is measured inside a 4" drop pipe of an irrigation pump. The altitude of the bottom of the drop pipe is 34.91 feet NGVD. The water level drops below the bottom of the drop pipe but cannot be measured.

Figure 12. Location of wells in Levy County.

Levy County

WELL NUMBER.--291414082560985. DOF - Cedar Key Tower. -141429001.

LOCATION.--Lat 29°14'14", long 82°56'09", Hydrologic Unit Code 03110101.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

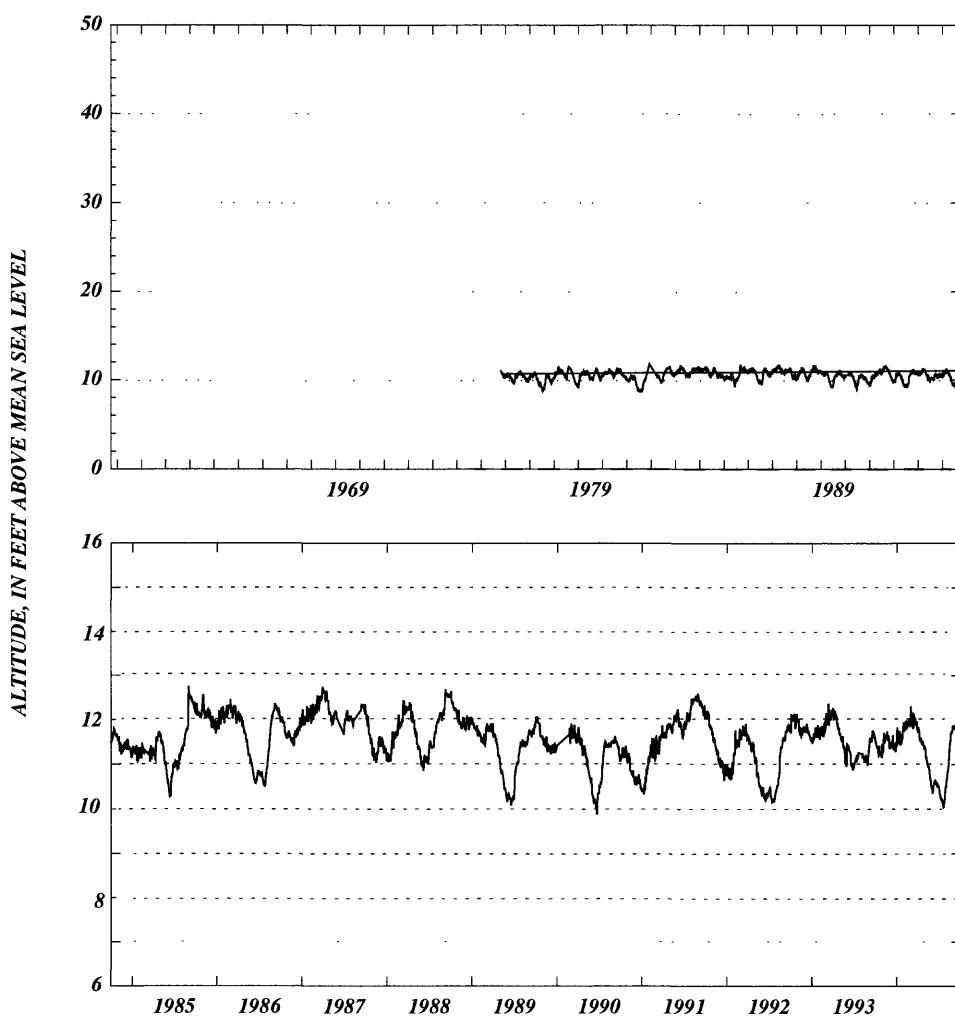

WELL CHARACTERISTICS.--Casing diameter 6 in., Casing depth 422 ft., Total depth 442 ft.

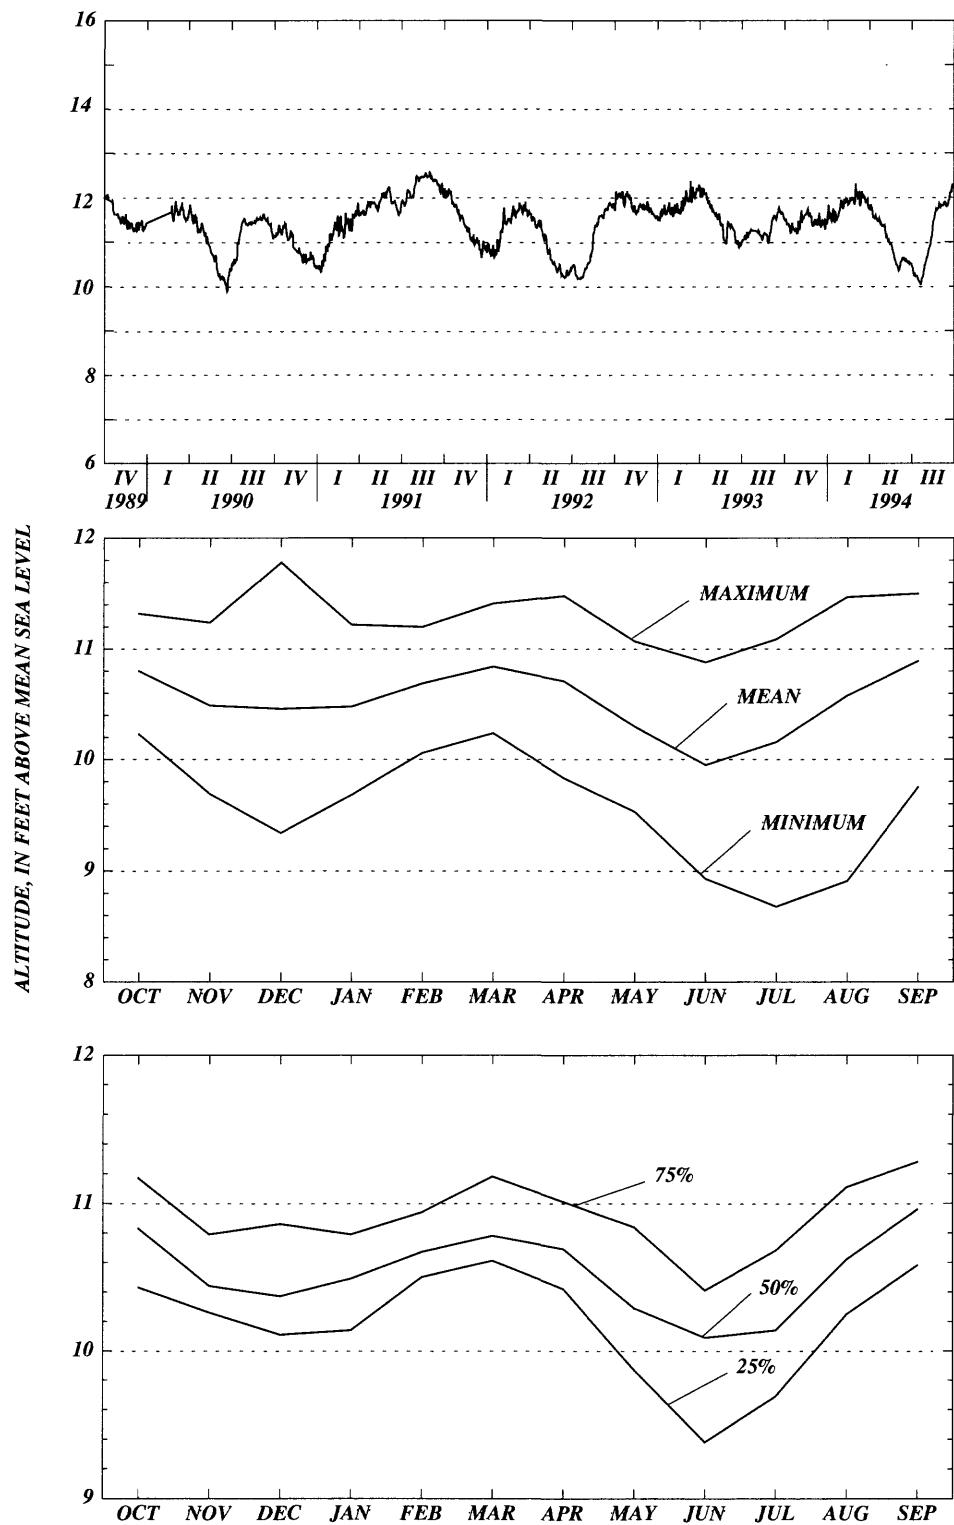

INSTRUMENTATION.--Recorder, set to elevation of Measuring Point 19.45 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--10-24-1975 to 09-30-94.*

EXTREME VALUES.--Maximum, 11.78 ft. (12-07-1981); minimum 8.59 ft. (07-19-1981).

Levy County

WELL NUMBER.--291910082341185. USGS - near Bronson. -131736001.

LOCATION.--Lat $29^{\circ}19'10''$, long $82^{\circ}34'11''$, Hydrologic Unit Code 03080102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

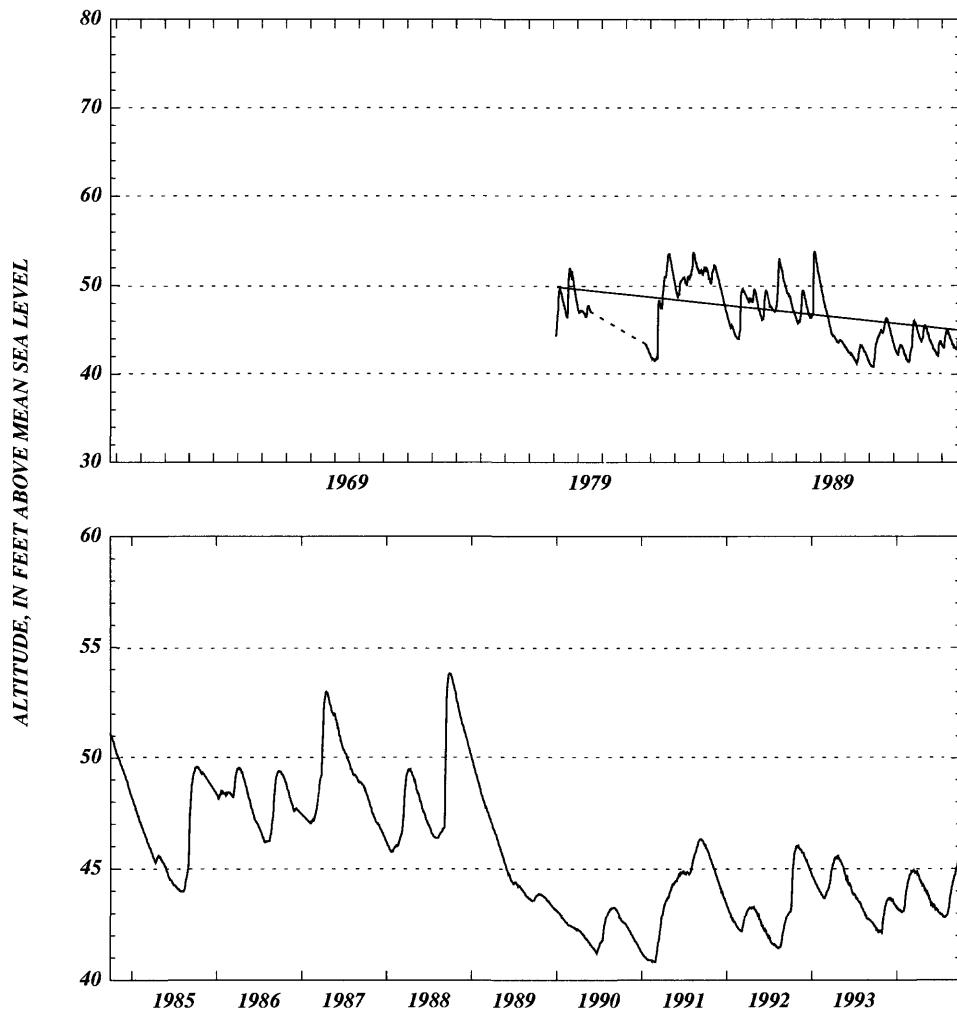

WELL CHARACTERISTICS.--Casing diameter 4 in., Casing depth 69 ft., Total depth 86 ft.

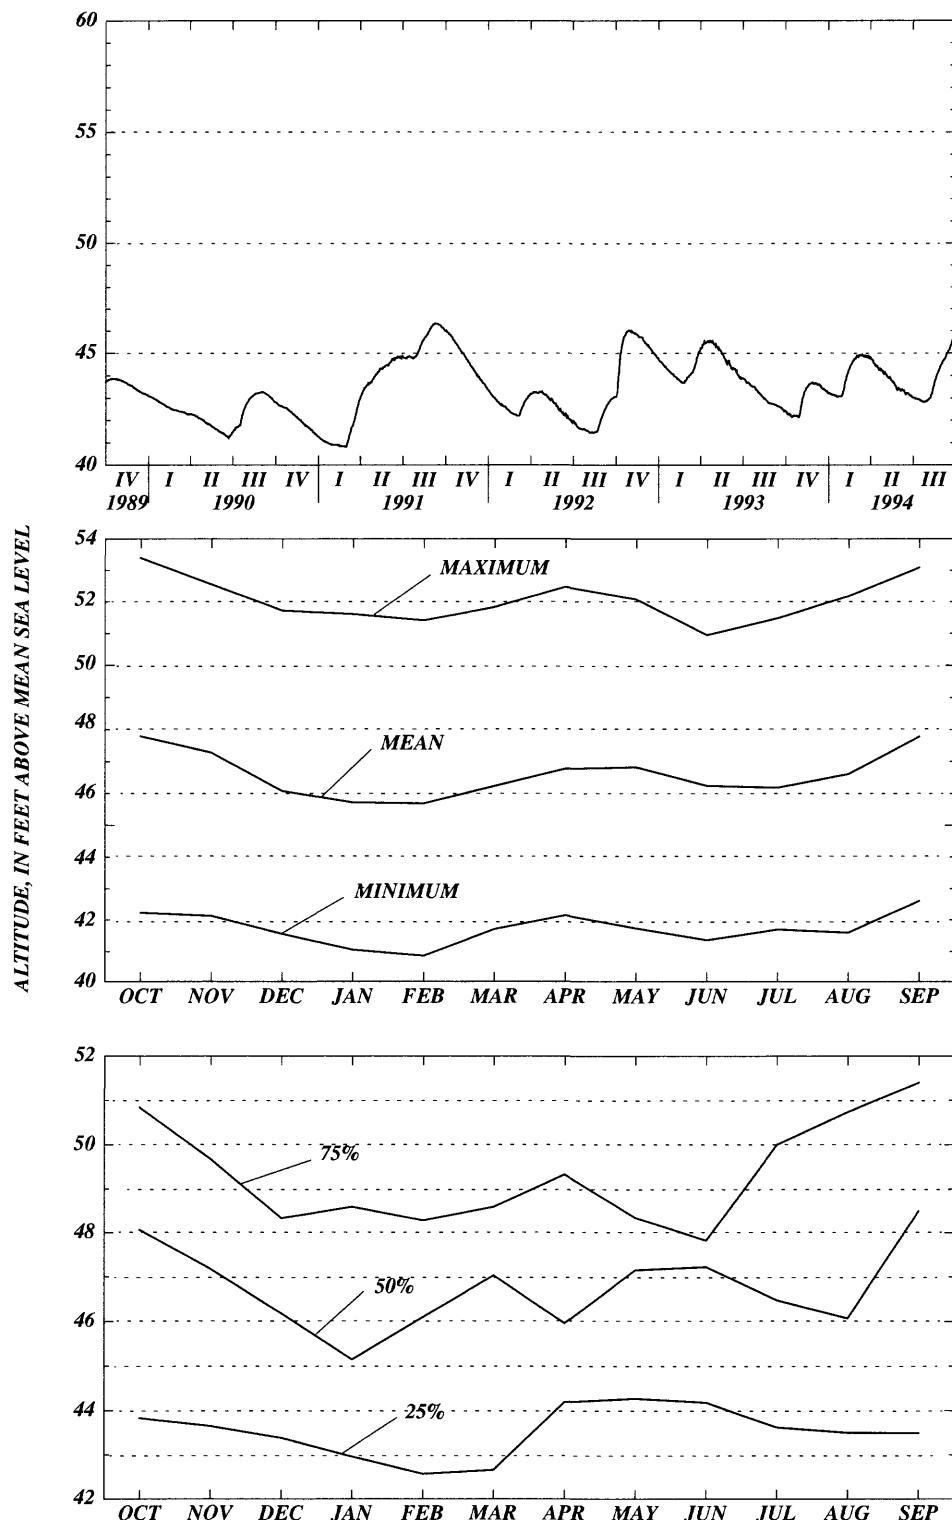

INSTRUMENTATION.--Recorder from 01-31-1977 to 07-01-1979; no record from 07-02-1979 to 10-07-1981; miscellaneous from 10-08-1981 to 04-05-1982; recorder from 04-06-1982 to 09-20-1994; elevation of the Measuring Point 94.30 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--01-31-1977 to 09-30-1994. *

EXTREME VALUES.--Maximum, 53.82 ft. (09-27-1988); minimum, 40.82 ft. (02-27-1990).

Levy County

WELL NUMBER.--292713082493685. H.E. Mills. -121508002.

LOCATION.--Lat $29^{\circ}27'13''$, long $82^{\circ}49'36''$, Hydrologic Unit Code 03110205.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

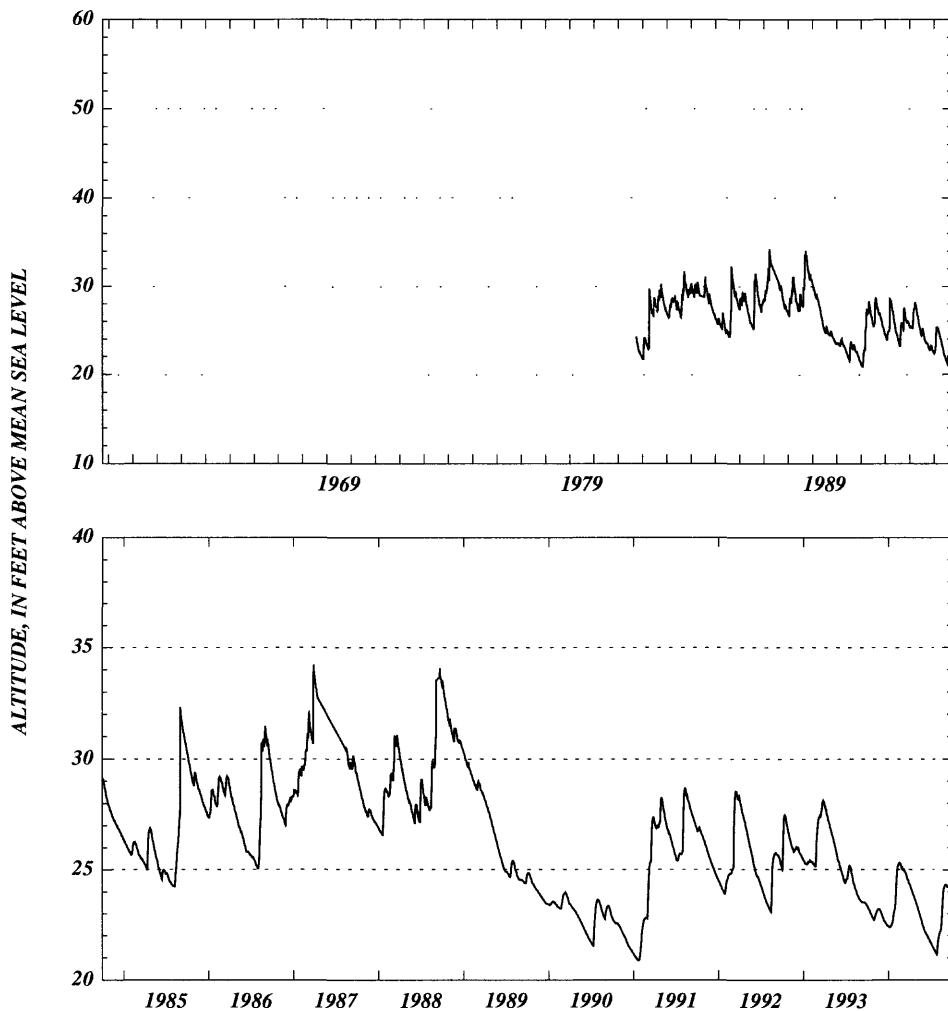

WELL CHARACTERISTICS.--Casing diameter 10 in., Casing depth 20 ft., Total depth 30 ft.

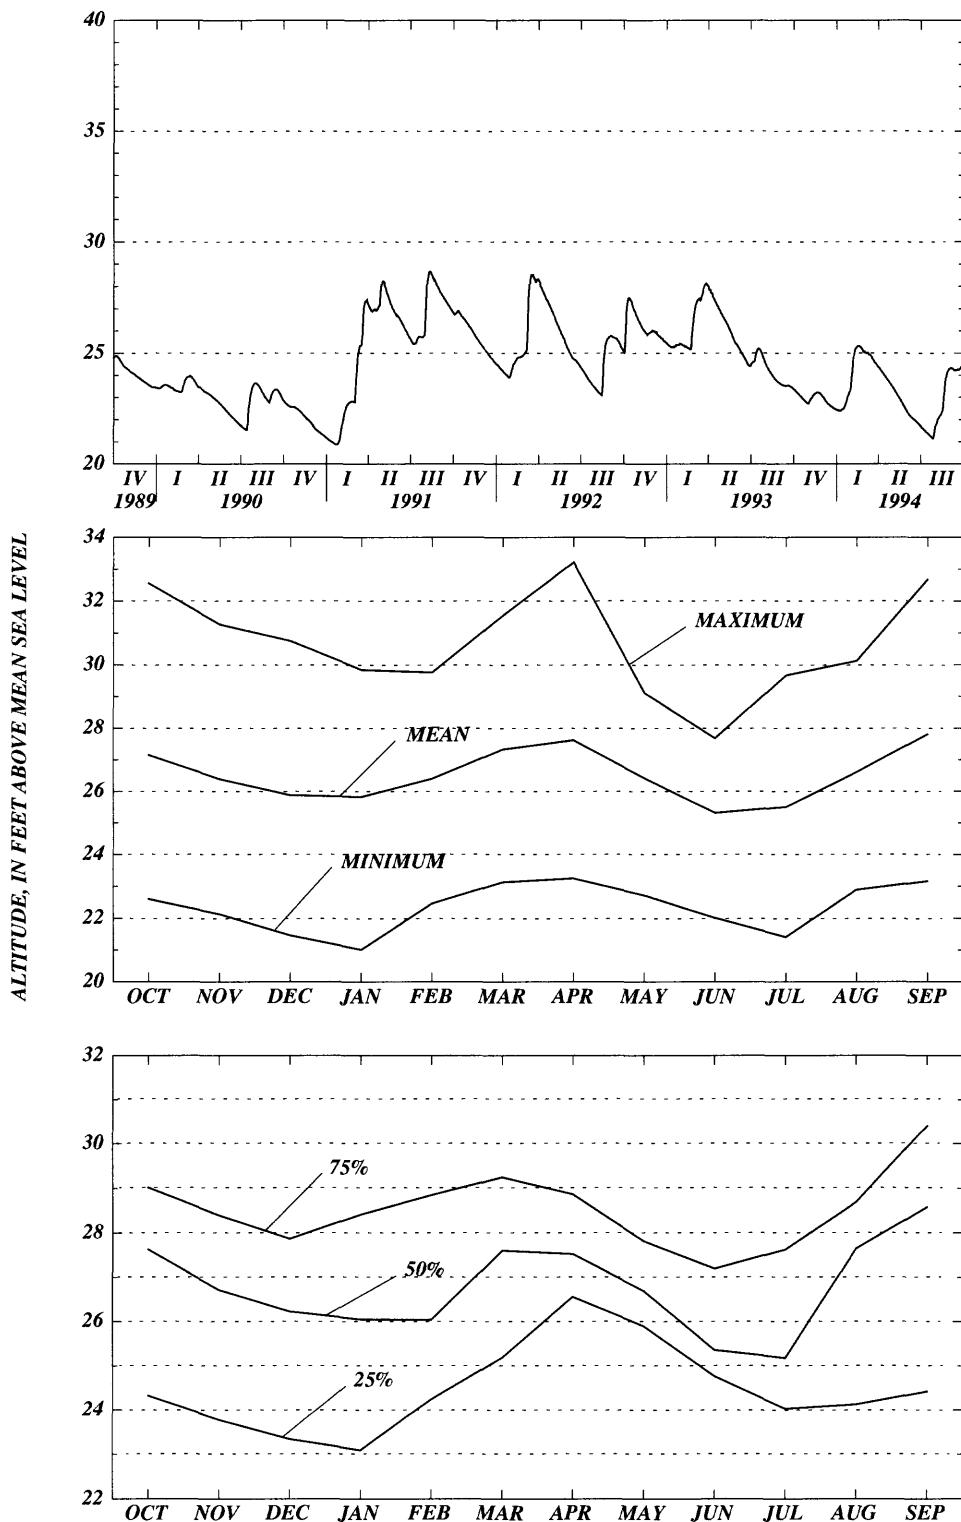

INSTRUMENTATION.--Recorder, set to elevation of the Measuring Point 34.93 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--10-02-1981 to 09-30-1994.

EXTREME VALUES.--Maximum, 34.21 ft. (03-30-1987); minimum, 20.88 ft. (01-24-1991).

Levy County

WELL NUMBER.--292921082583285. DNR - Manatee Springs State Park. -111326004.

LOCATION.--Lat $29^{\circ}29'21''$, long $82^{\circ}58'32''$, Hydrologic Unit Code 03110205.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

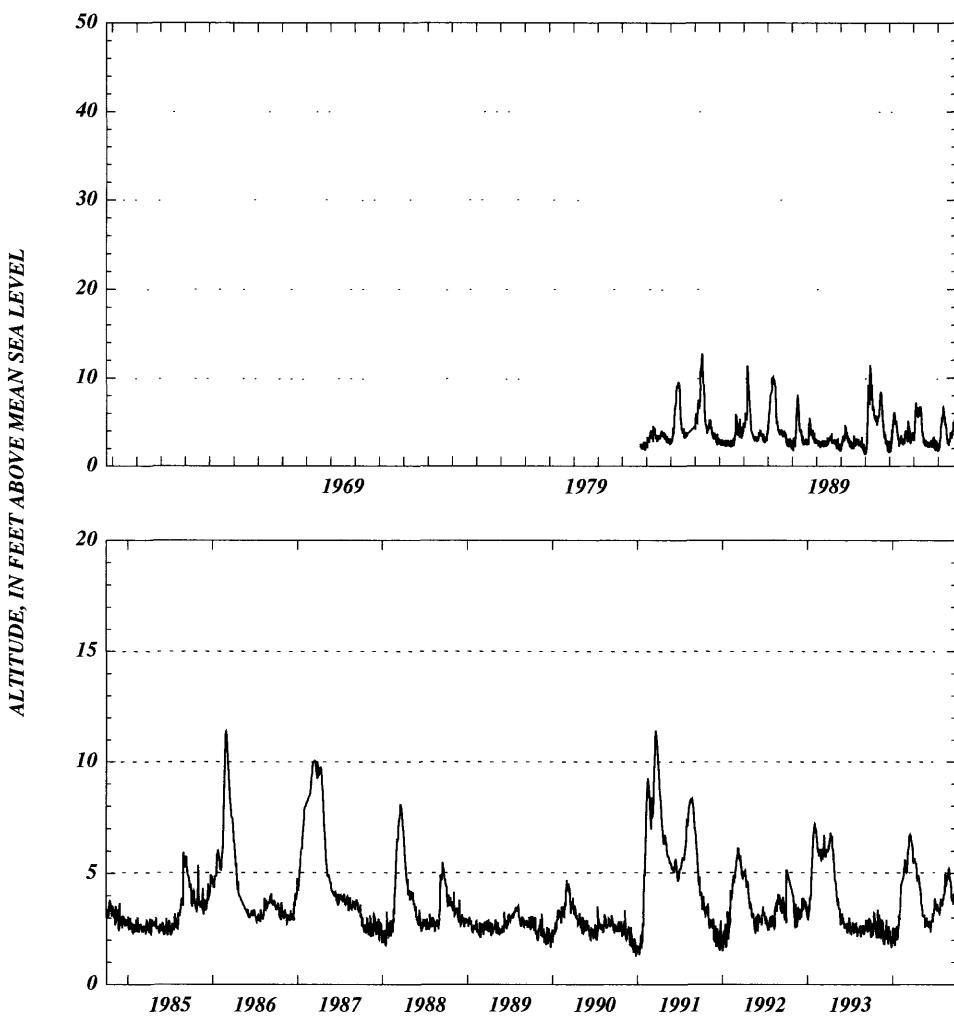

WELL CHARACTERISTICS.--Casing diameter 6 in., Casing depth 58 ft., Total depth 99 ft.

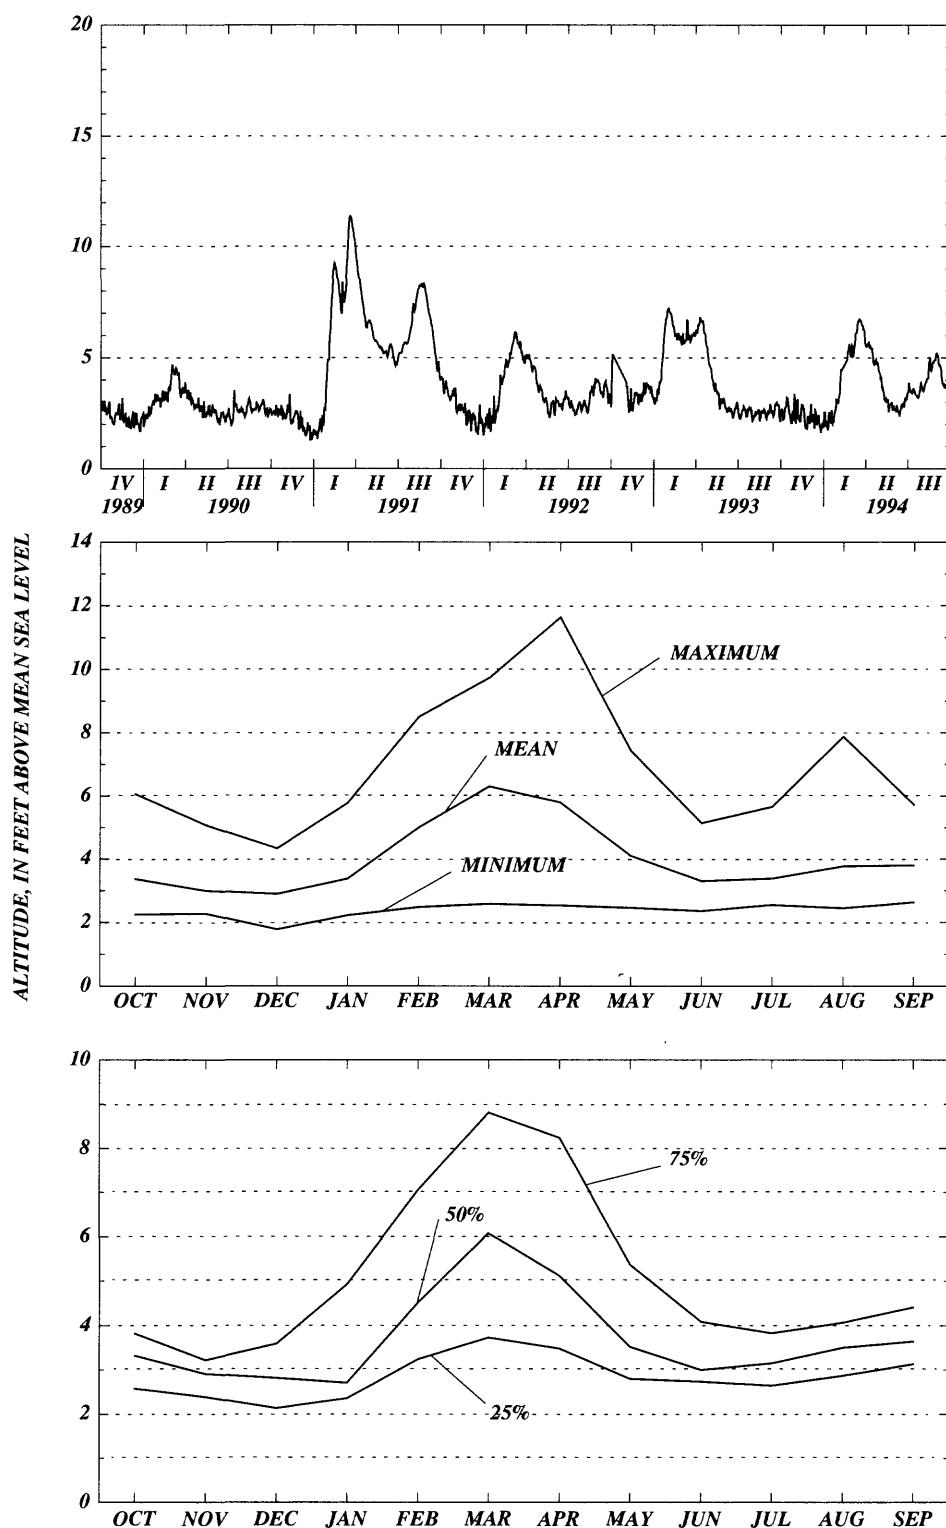

INSTRUMENTATION.--Recorder, set to elevation of the Measuring Point 16.66 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

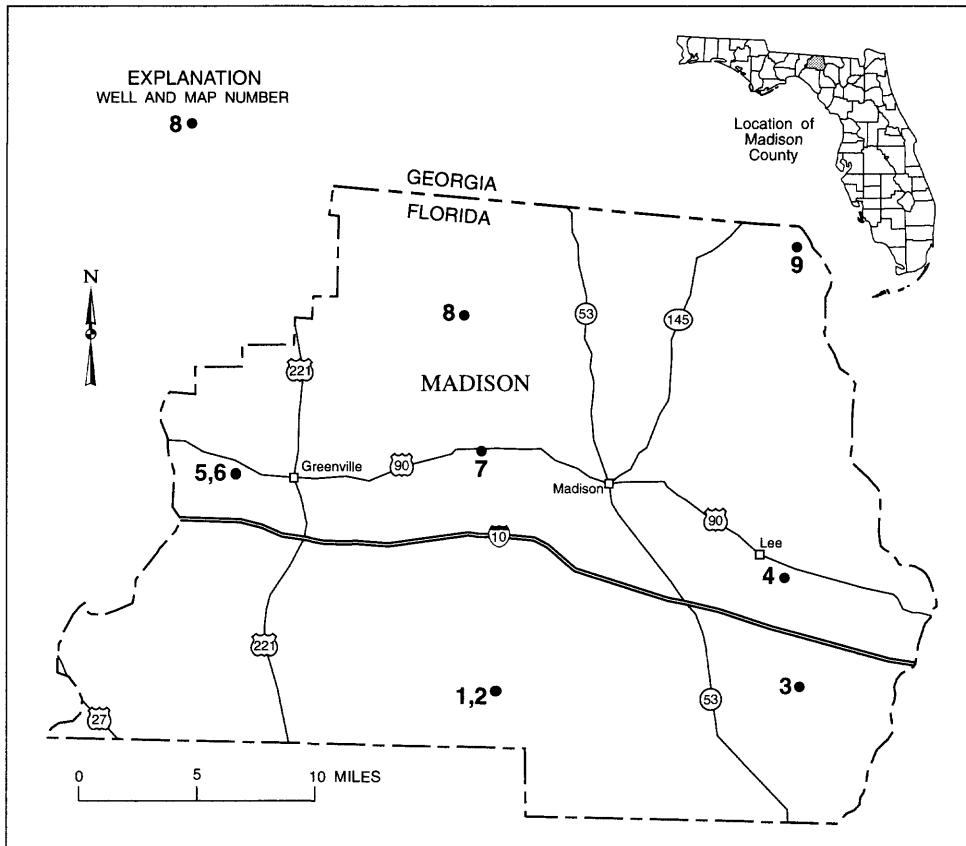

PERIOD OF RECORD.--10-01-1981 to 09-30-1994.

EXTREME VALUES.--Maximum, 12.69 ft. (04-17-1984); minimum, 1.26 ft. (12-25-1990).

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 3 ft., Total depth 13 ft.

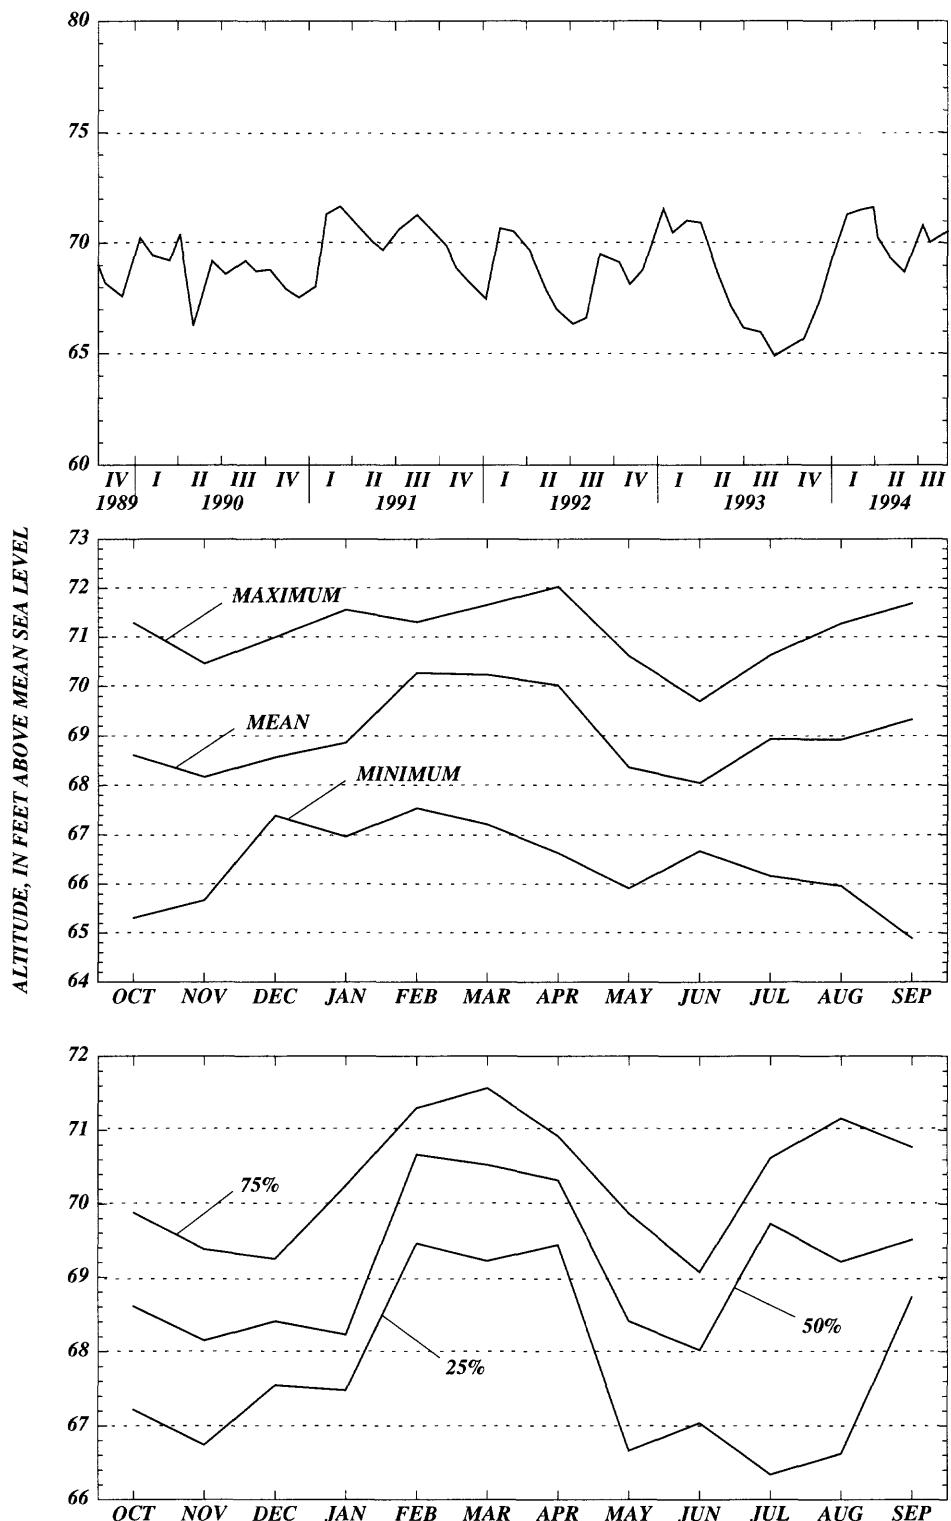

INSTRUMENTATION.--Elevation of the Measuring Point 76.13 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--04-14-1987 to 09-30-1994. *

EXTREME VALUES.--Maximum observed, 72.03 ft. (04-14-1987); minimum observed, 64.89 ft. (09-03-1993).

Taylor County

WELL NUMBER.--300131083260485. Procter and Gamble. -050928004.

LOCATION.--Lat 30°01'31", long 83°26'04", Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

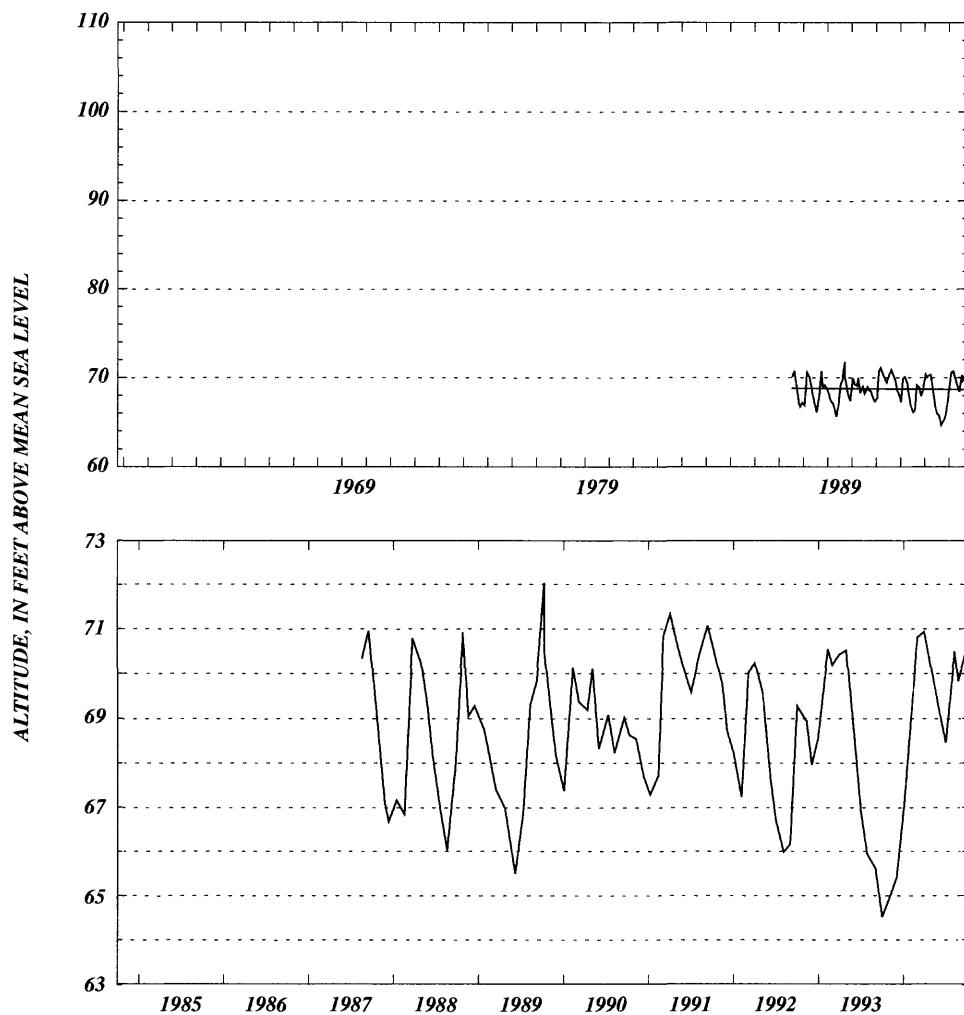

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 40 ft., Total depth 60 ft.

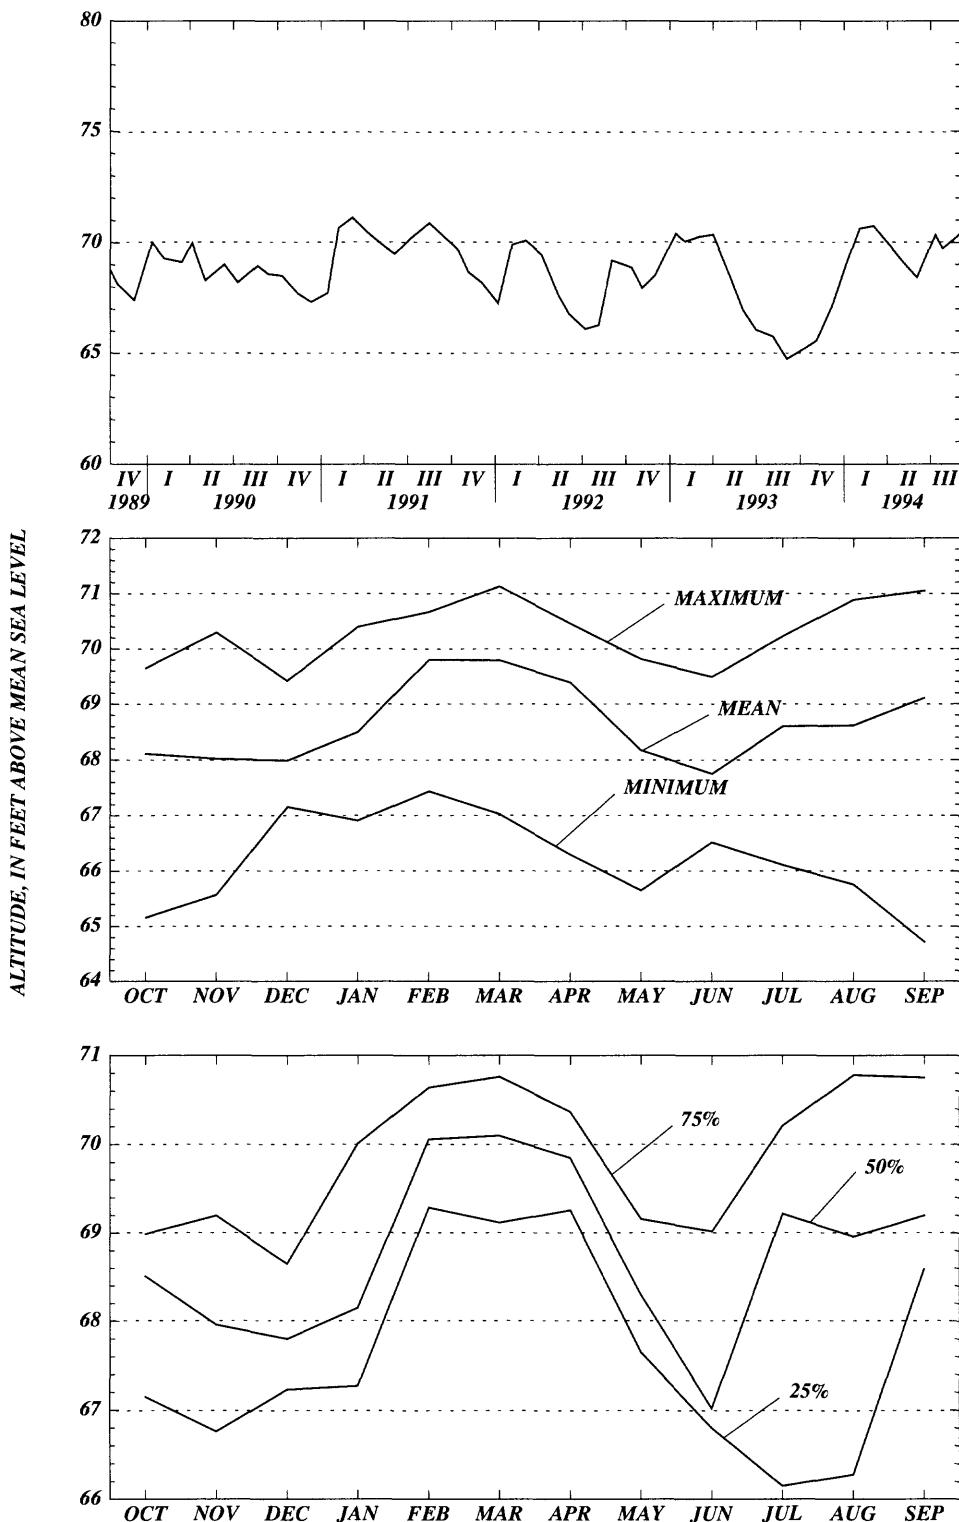

INSTRUMENTATION.--Elevation of Measuring Point 74.80 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--07-22-1987 to 09-30-1994. *

EXTREME VALUES.--Maximum observed, 71.80 ft. (09-11-1989); minimum observed, 64.72 ft. (09-03-1993).

Taylor County

WELL NUMBER.--300226083430385. DOF - Hampton Springs Tower. -050615002.

LOCATION.--Lat $30^{\circ}02'26''$, long $83^{\circ}43'03''$, Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

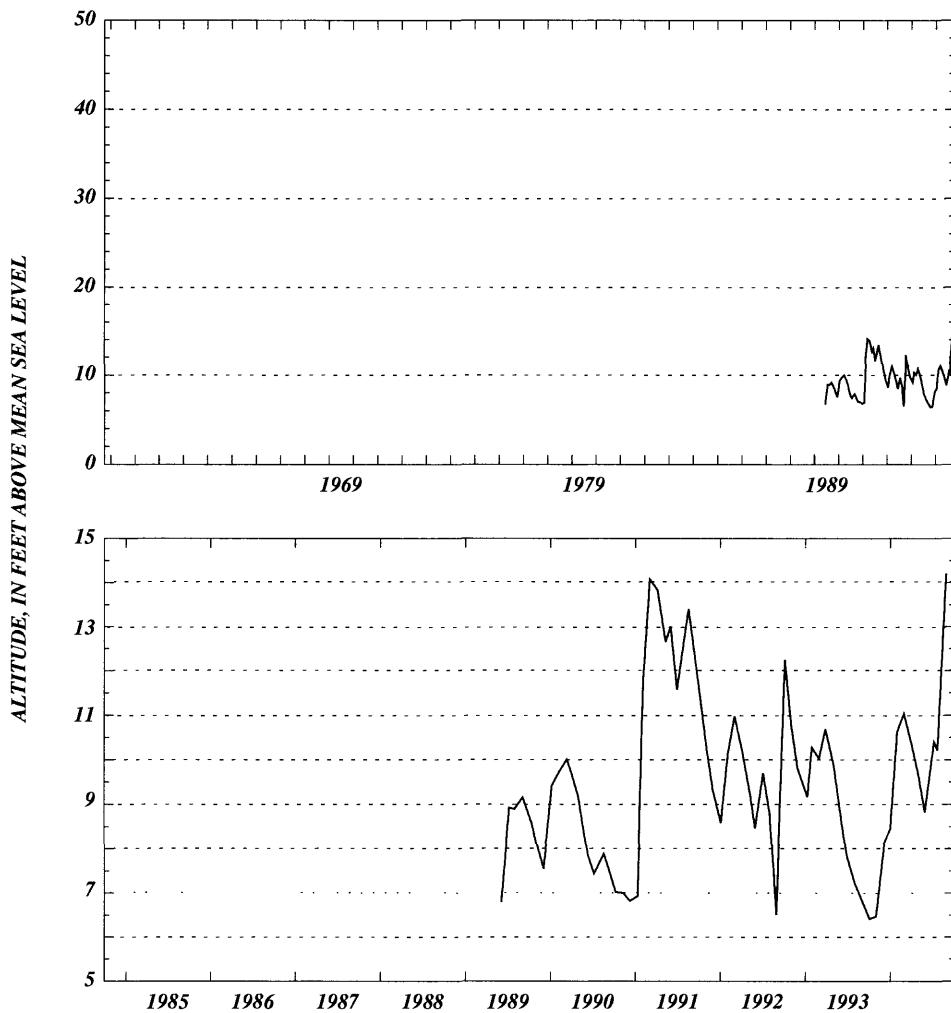

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 18 ft., Total depth 38 ft.

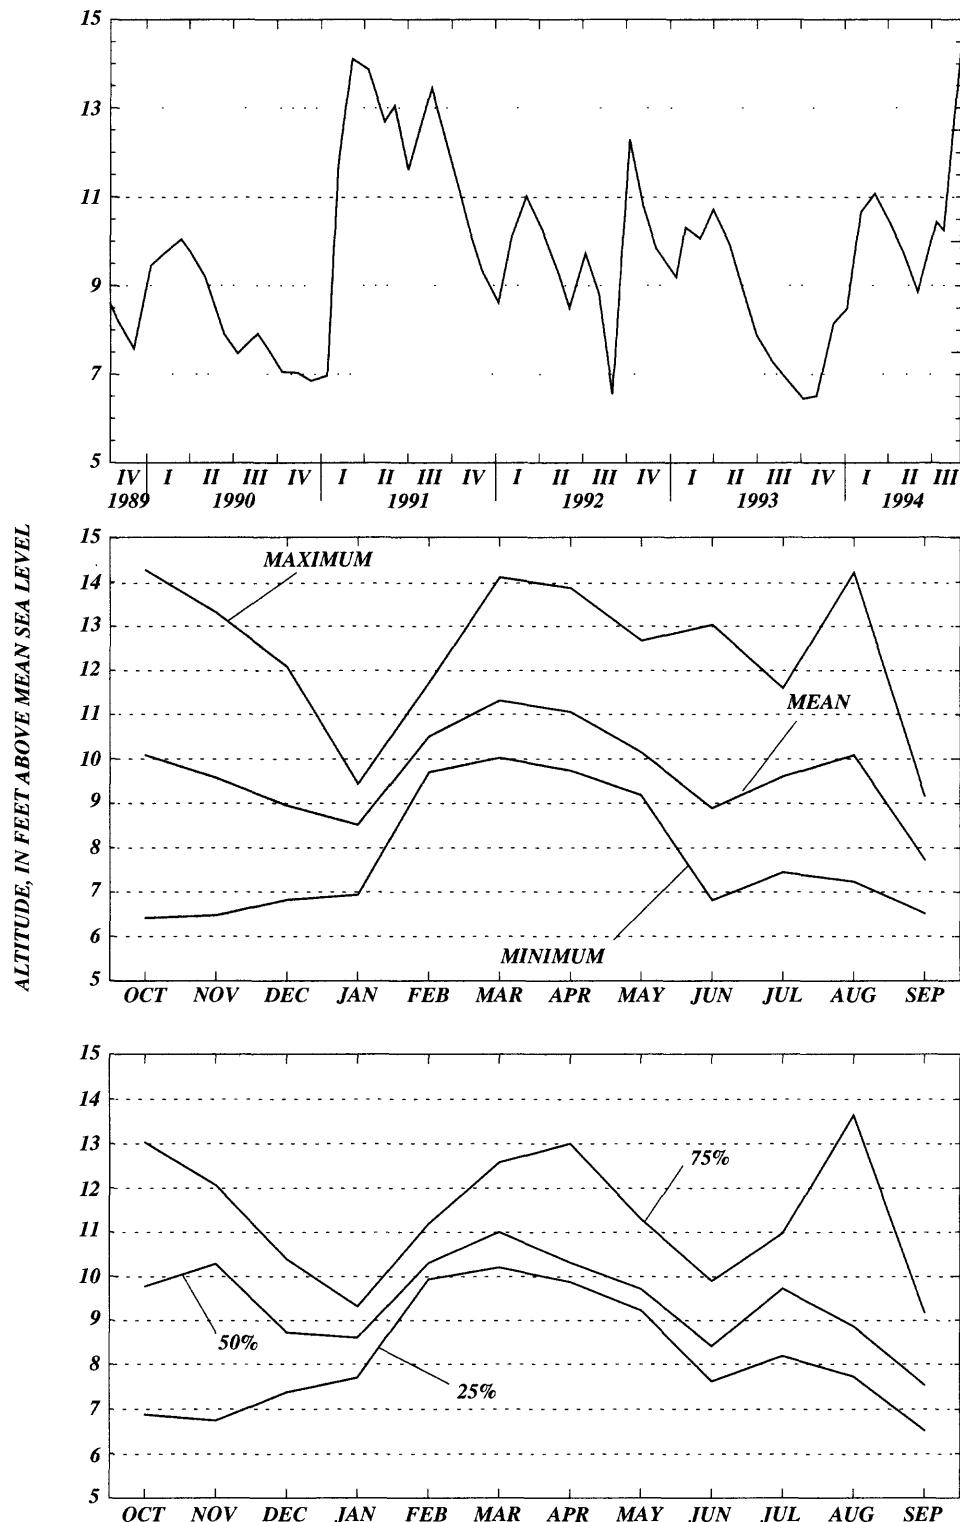

INSTRUMENTATION.--Elevation of Measuring Point 28.42 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--06-07-1989 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 14.22 ft. (08-31-1994); minimum observed, 6.42 ft. (10-06-1993).

Taylor County

WELL NUMBER.--300358083305085. Procter and Gamble. -050810001.

LOCATION.--Lat 30°03'58", long 83°30'50", Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

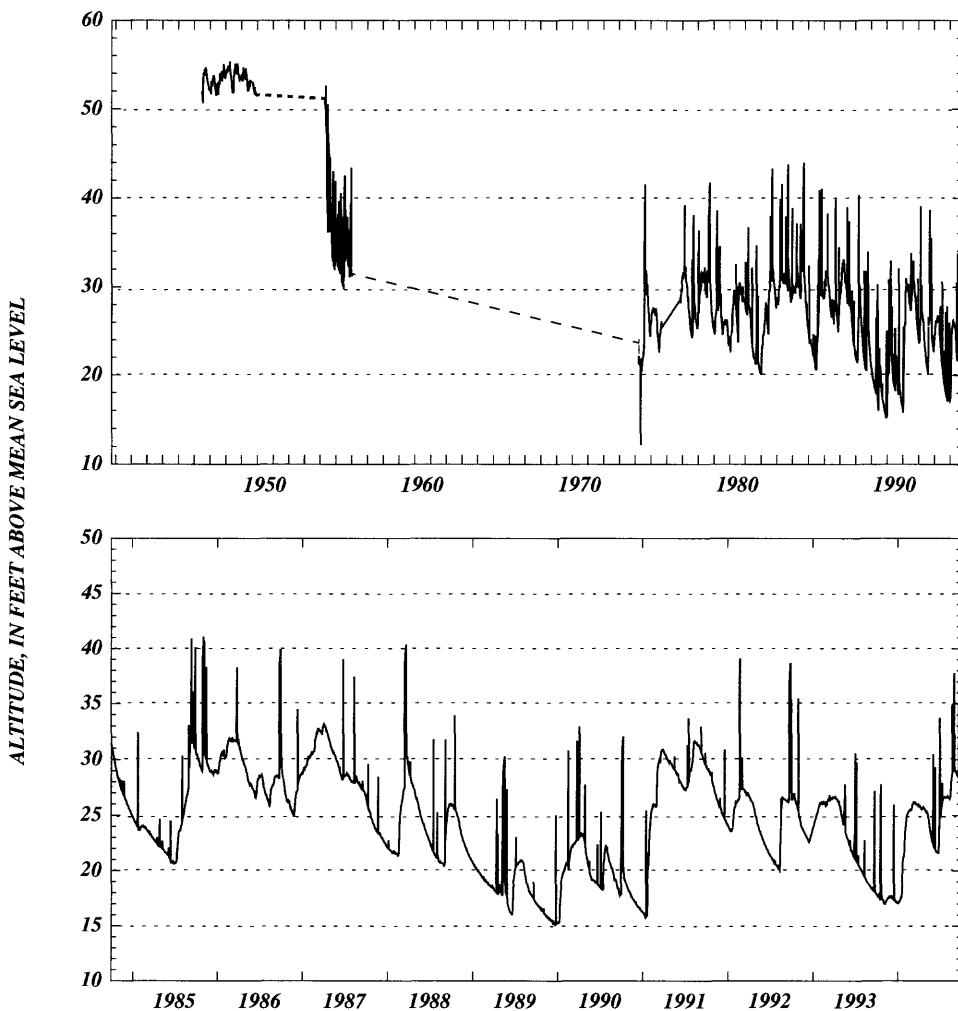

WELL CHARACTERISTICS.--Casing diameter 17 in., Casing depth 191 ft., Total depth 230 ft.

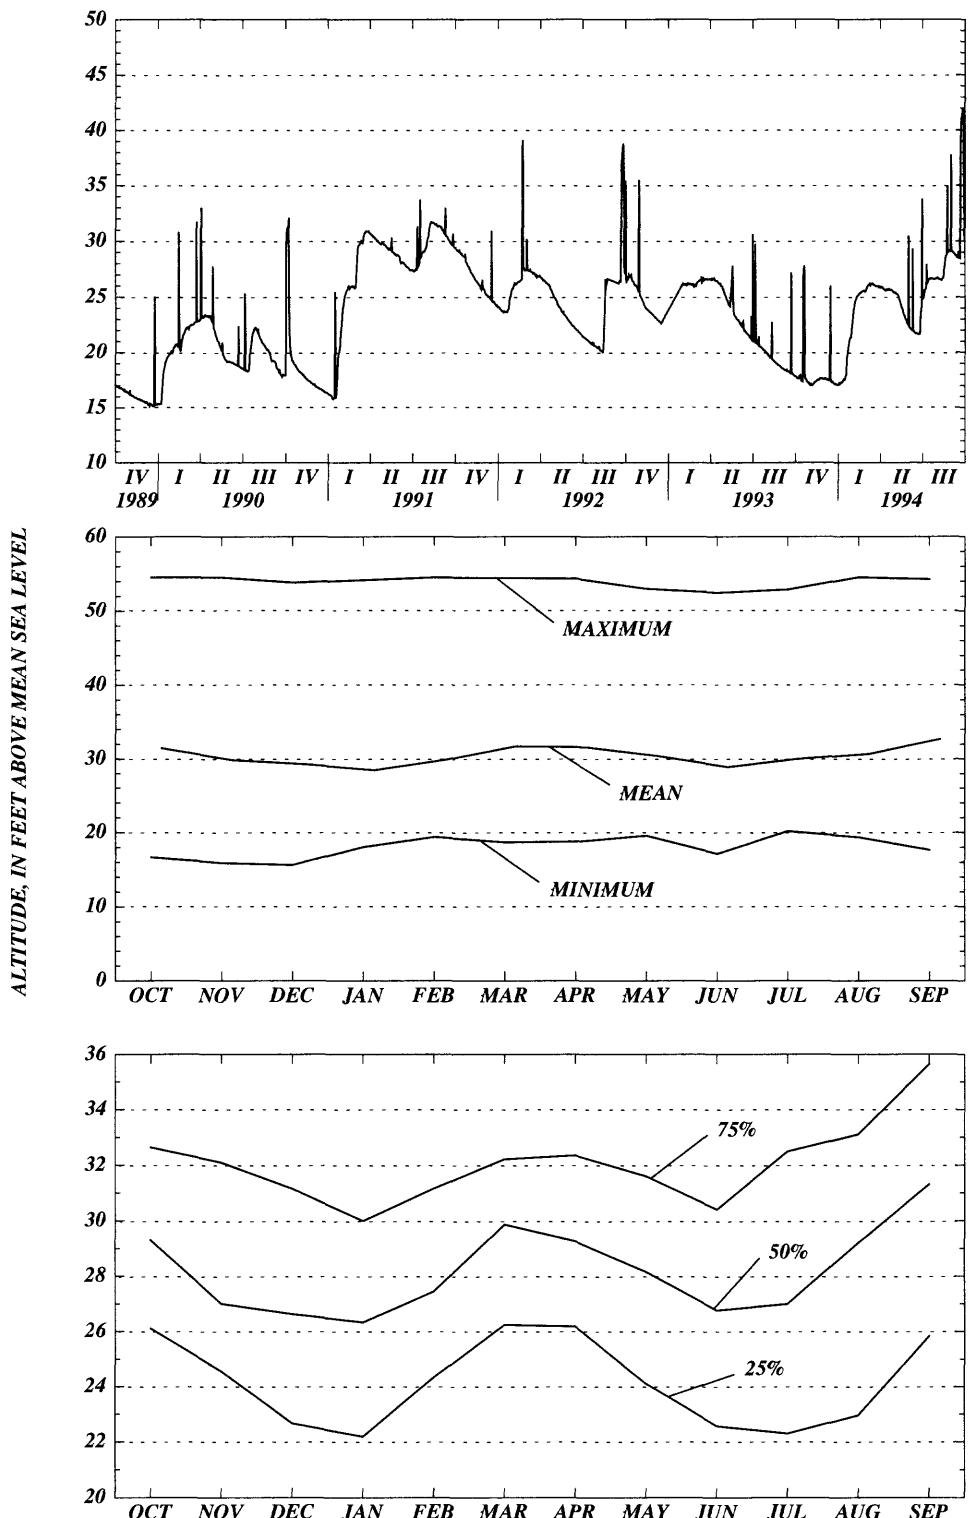

INSTRUMENTATION.--Recorder from 07-03-1946 to 12-17-1949; no record from 12-18-1949 to 03-08-1954; recorder from 03-09-1954 to 12-31-1955; no record from 01-01-1956 to 01-04-1974; miscellaneous from 01-05-1974 to 10-31-1976; recorder from 11-01-1976 to 10-10-1994; miscellaneous from 10-17-1994 to 12-28-1994. Elevation of Measuring Point 57.09 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--07-03-1946 to 09-30-1994.

EXTREME VALUES.--Maximum, 55.38 ft. (04-02-1948); minimum, 12.19 ft. (05-05-1974).

Taylor County

WELL NUMBER.--300447083343085. Aluminum Fab Products. -050701001.

LOCATION.--Lat 30°04'47", long 83°34'30", Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

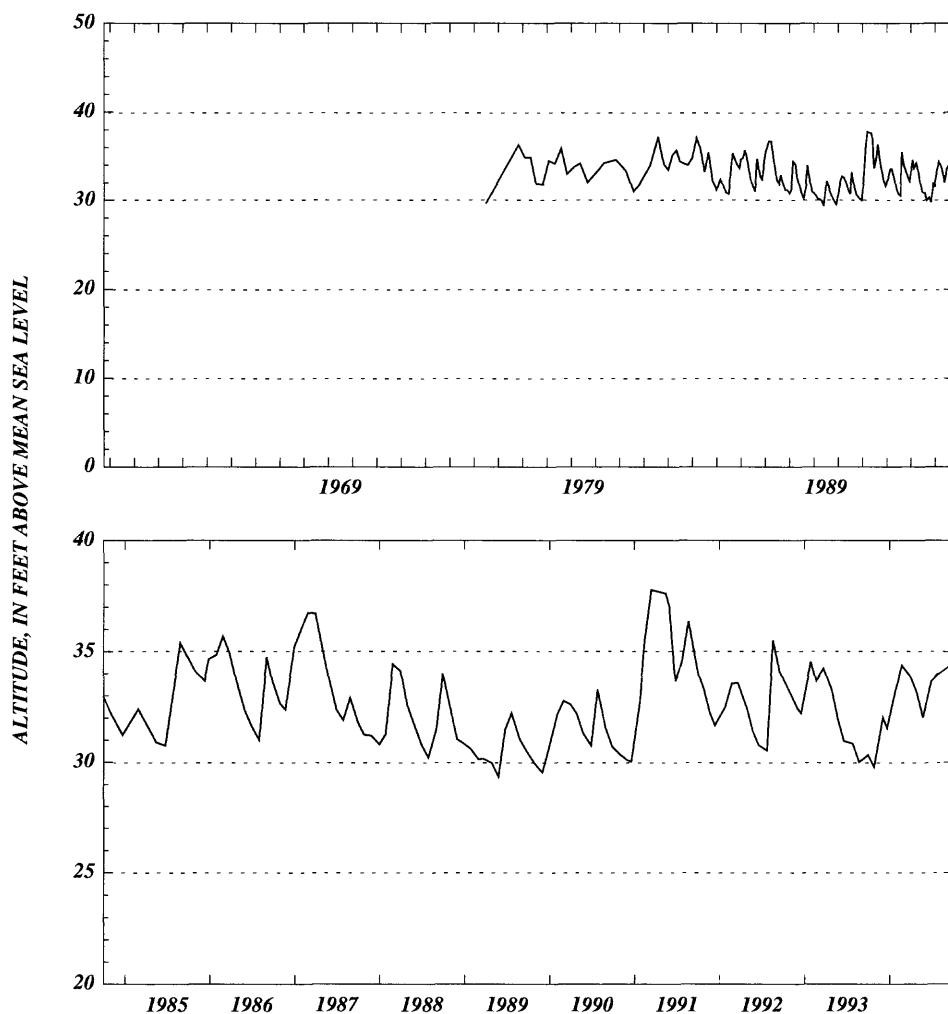

WELL CHARACTERISTICS.--Casing diameter 10 in., Casing depth 179 ft., Total depth 259 ft.

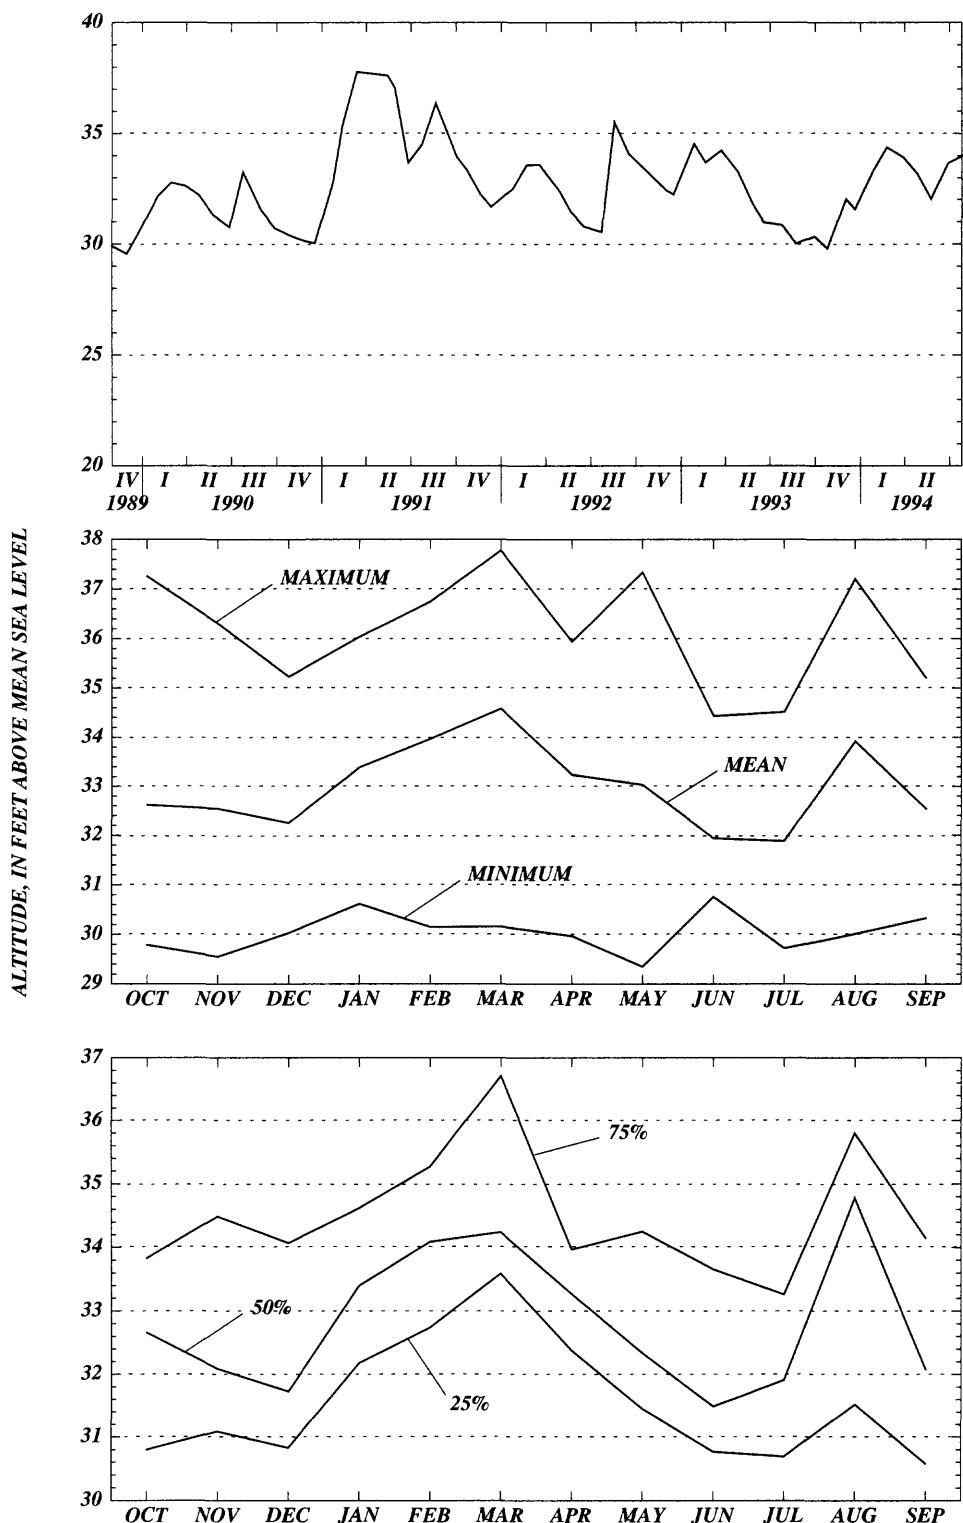

INSTRUMENTATION.--Elevation of the Measuring Point 46.81 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--07-01-1975 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 37.78 ft. (03-13-1991); minimum observed, 29.35 ft. (05-26-1989).

Taylor County

WELL NUMBER.--300530083342085. DOF - Perry HQ. -040736005.

LOCATION.--Lat 30°05'30", long 83°34'20", Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary system, Geologic Unit Code 120FLRD.

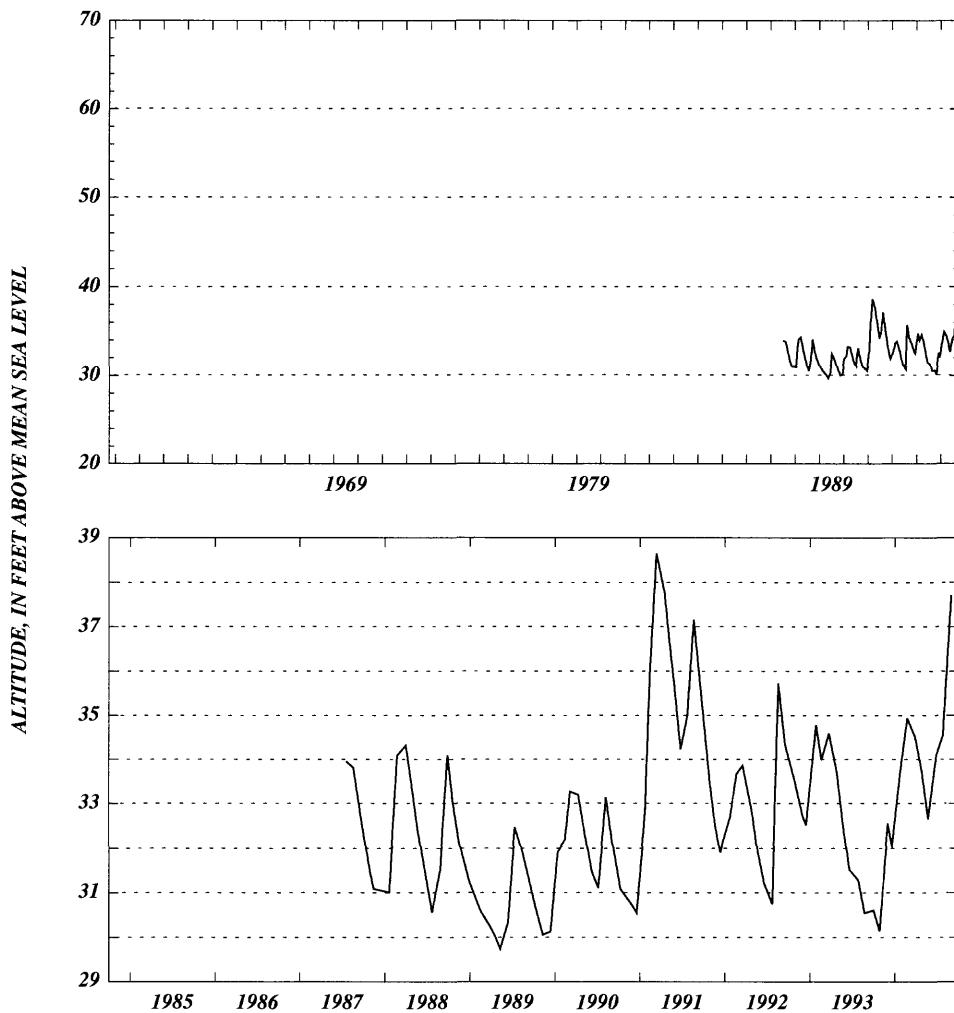

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 24 ft., Total depth 34 ft.

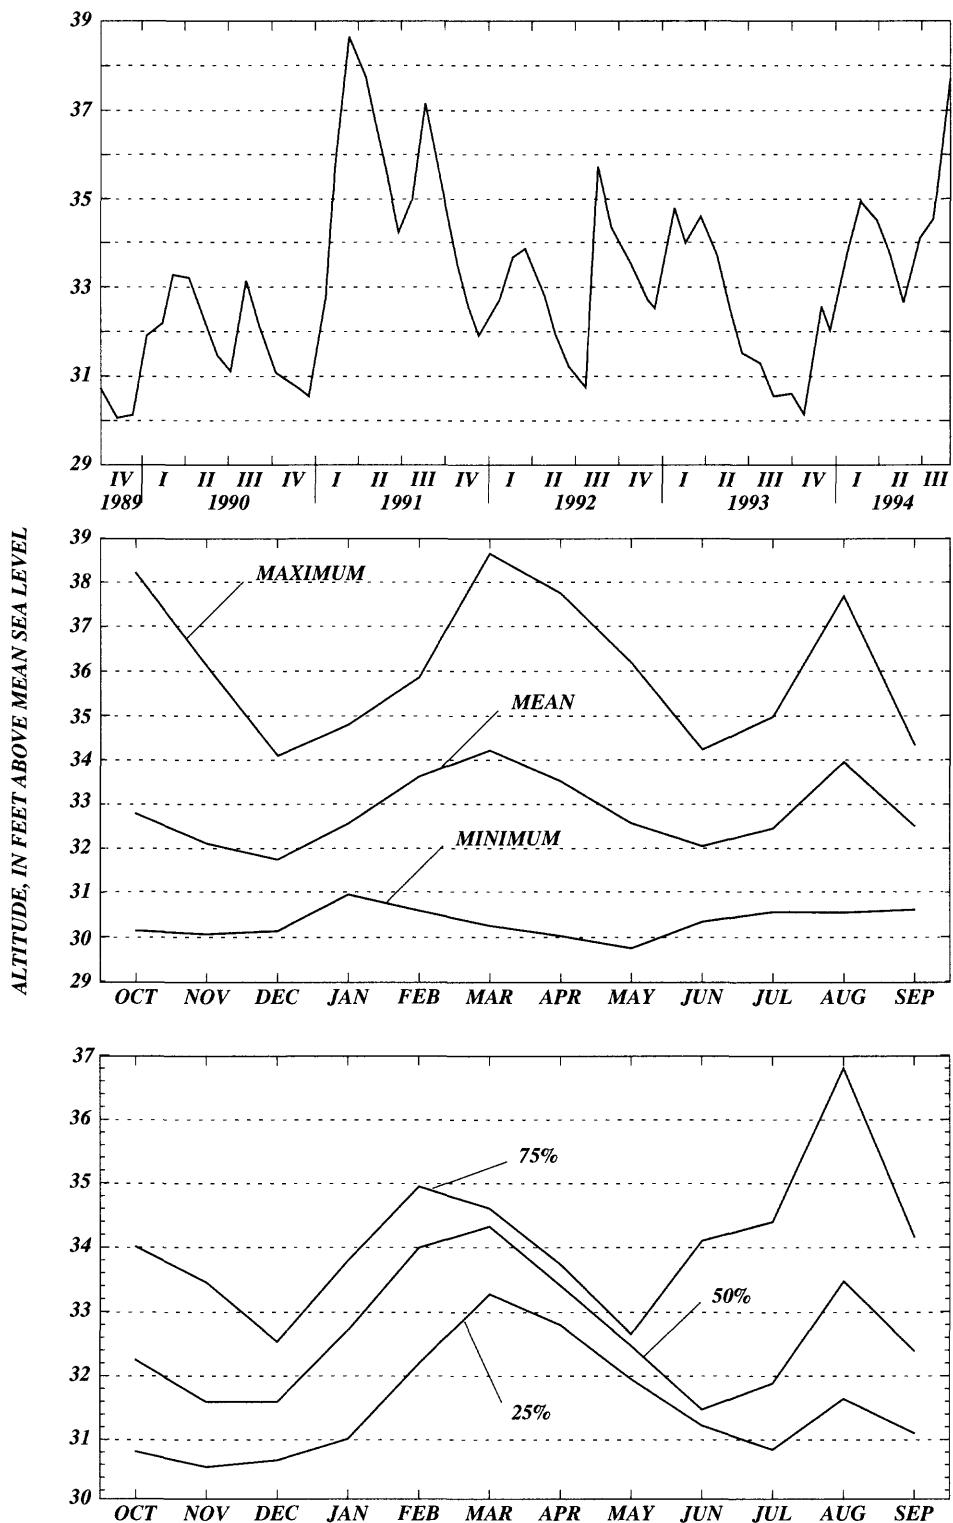

INSTRUMENTATION.--Elevation of Measuring Point 47.99 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--07-22-1987 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 38.65 ft. (03-13-1990); minimum observed, 29.74 ft. (05-10-1989).

Taylor County

WELL NUMBER.--300531083342185. DOF - Perry HQ. -040736006.

LOCATION.--Lat $30^{\circ}05'31''$, long $83^{\circ}34'21''$, Hydrologic Unit Code 03110102.

AQUIFER.--Surficial aquifer, Geologic Unit Code 110NRSD.

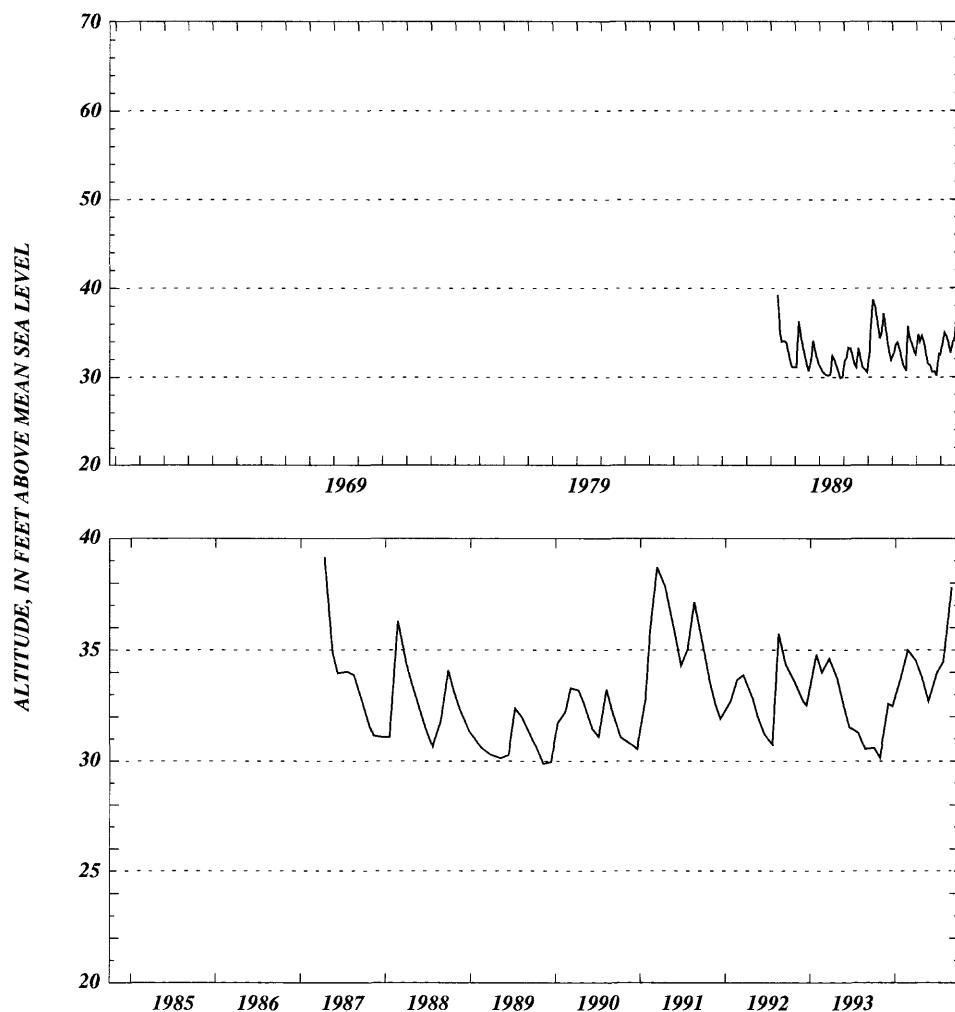

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 7 ft., Total depth 17 ft.

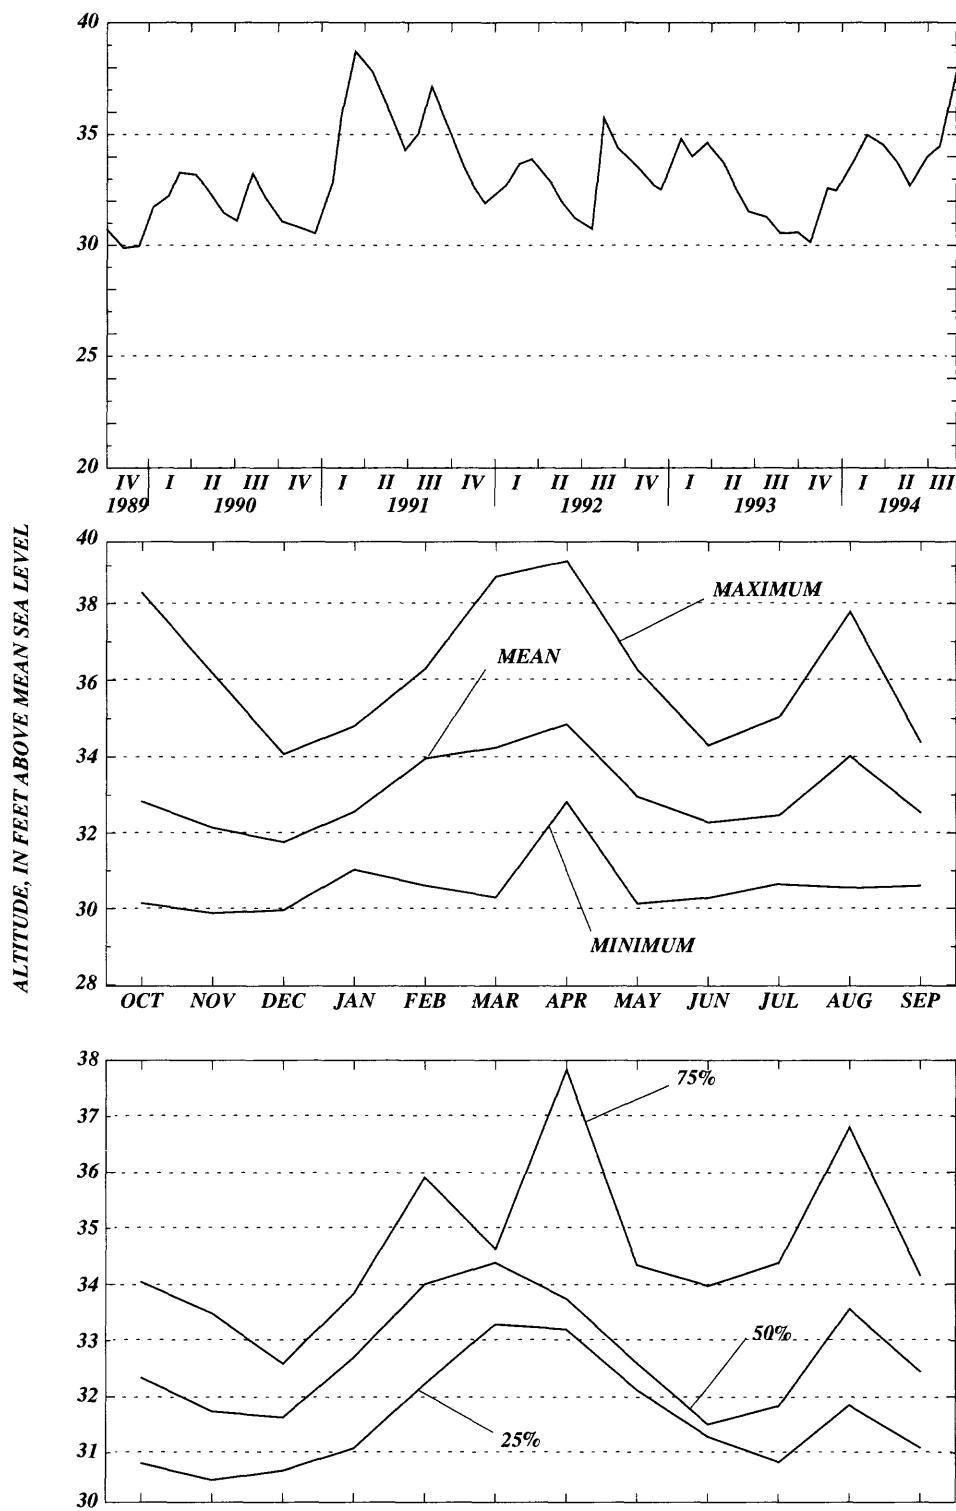

INSTRUMENTATION.--Elevation of Measuring Point 47.98 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--04-14-1987 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 39.13 ft. (04-14-1987); minimum observed, 29.88 ft. (11-09-1989).

Taylor County

WELL NUMBER.--300851083580885. Floyd Sumner. -040407001.

LOCATION.--Lat 30°08'51", long 83°58'08", Hydrologic Unit Code 03110102.

AQUIFER.--Upper Floridan aquifer of the Tertiary System, Geologic Unit Code 120FLRD.

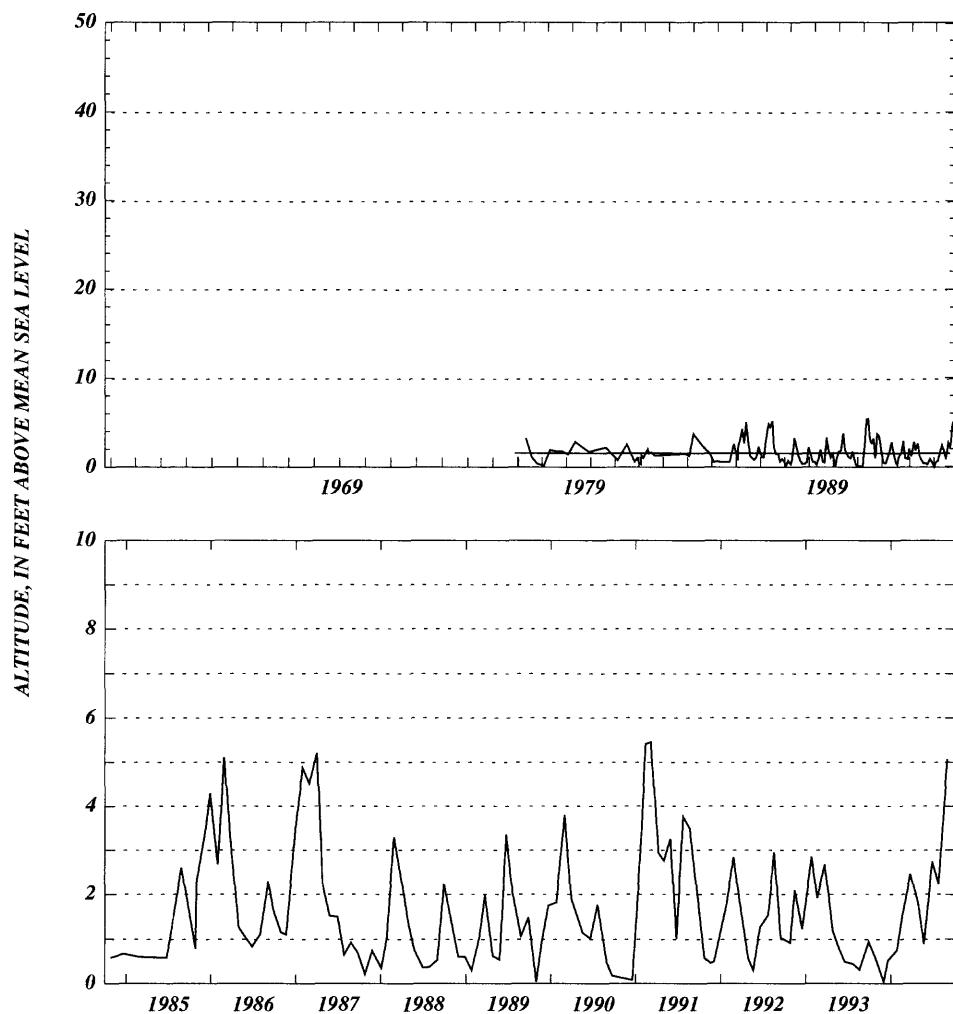

WELL CHARACTERISTICS.--Casing diameter 2 in., Casing depth unknown, Total depth 12 ft.

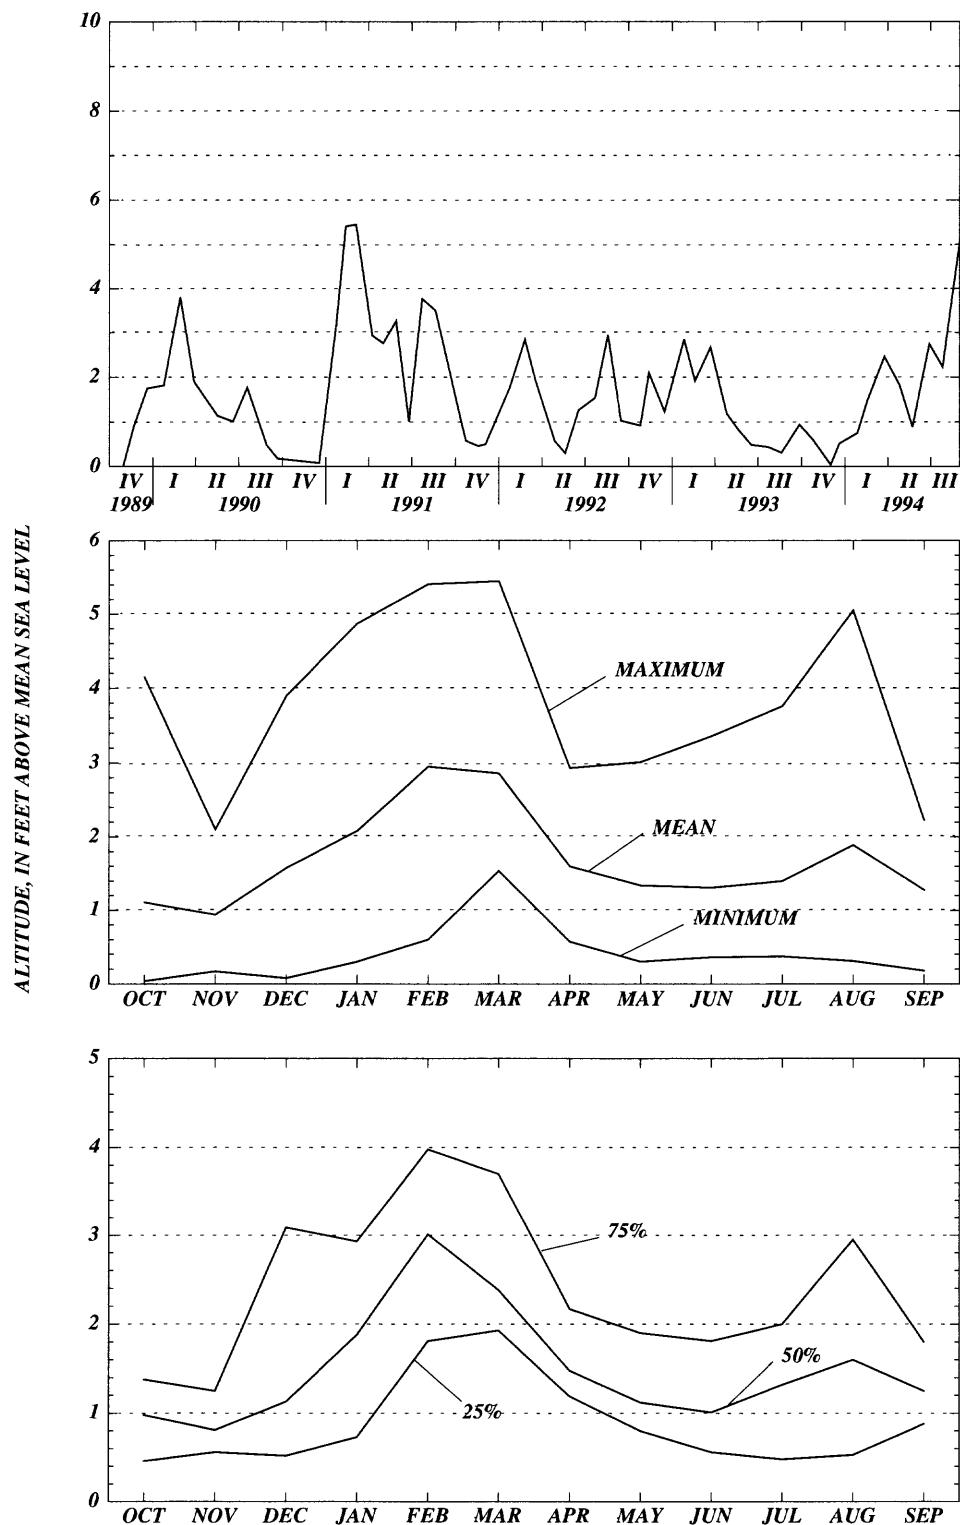

INSTRUMENTATION.--Elevation of Measuring Point 6.00 ft. NGVD

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--02-04-1977 to 09-30-1994. *

EXTREME VALUES.--Maximum observed, 5.45 ft. (03-06-1991); minimum observed, 0.04 ft. (10-31-1989).

Taylor County

WELL NUMBER.--301111083315885. Procter and Gamble. -030833002.

LOCATION.--Lat $30^{\circ}11'11''$, long $83^{\circ}31'58''$, Hydrologic Unit Code 03110102.

AQUIFER.--Surficial aquifer, Geologic Unit Code 110NRSD.

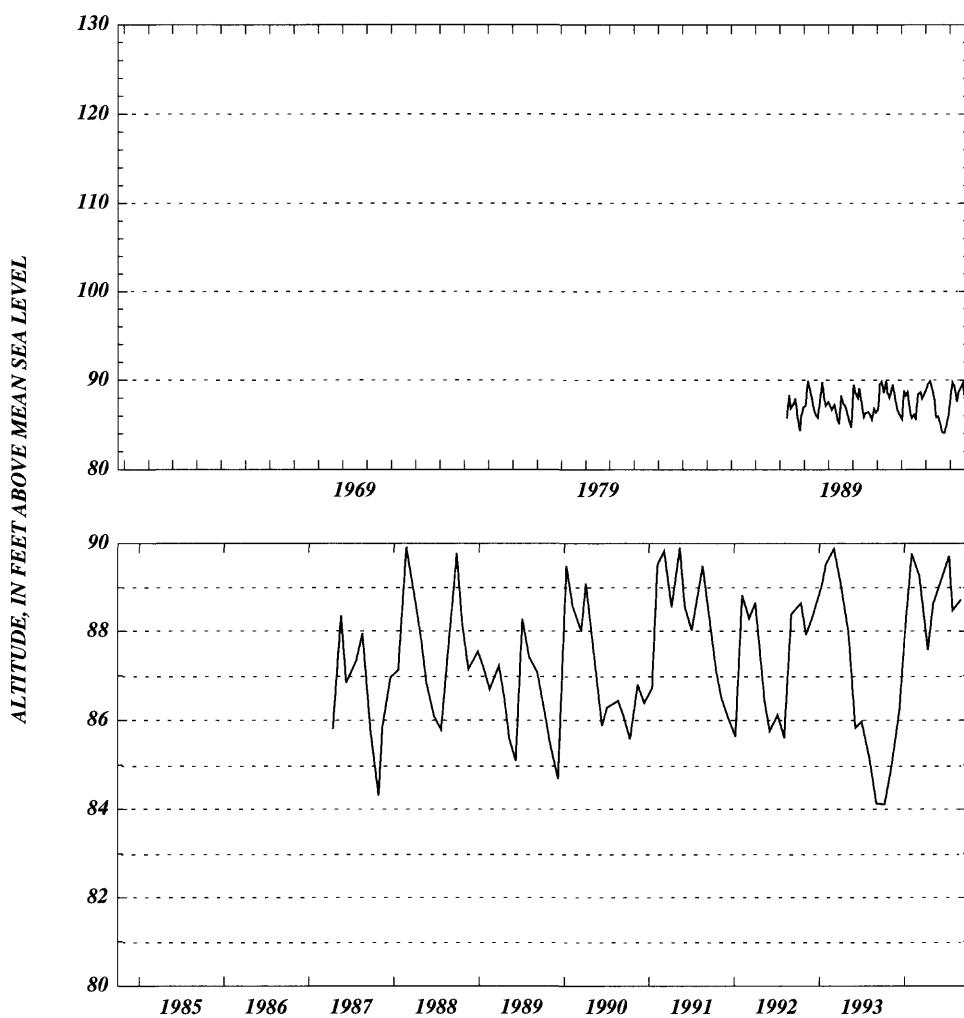

WELL CHARACTERISTICS.--Casing diameter 3 in., Casing depth 3 ft., Total depth 13 ft.

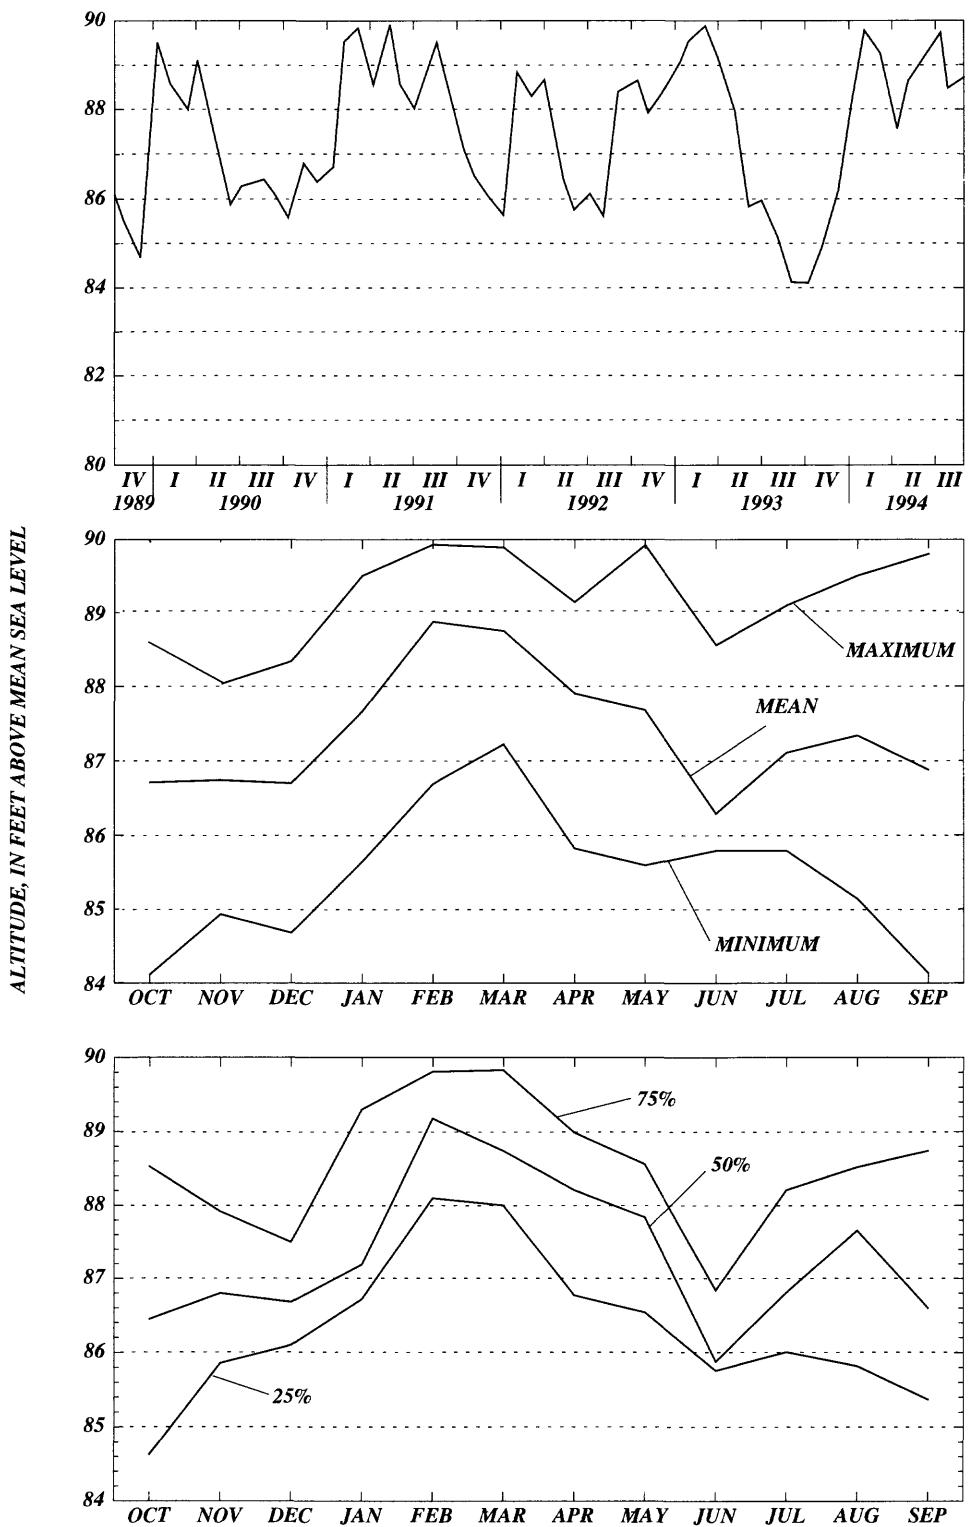

INSTRUMENTATION.--Elevation of Measuring Point 92.99 ft., NGVD.

DATUM.--The National Geodetic Vertical Datum of 1929.

PERIOD OF RECORD.--04-14-1987 to 09-30-1994.

EXTREME VALUES.--Maximum observed, 89.92 ft. (02-23-1988); minimum observed, 84.11 ft. (10-07-1993).

APPENDIX I

Location, Aquifer Monitored, and Frequency of Ground-Water
Level Measurements

The following Measurement frequency column lists patterns in the frequency of measurements. Major disruptions to these patterns are noted as No record. Daily: one reading from continuous recorder; Periodic: readings every 5th day and end of month taken from continuous recorder. Monthly, Bimonthly, Quarterly, Miscellaneous, Twice a year, Once a year, Twice a month, and One measurement are from tape down readings. Monthly: once a month; bimonthly: once every other month; quarterly: once every 3 months, miscellaneous; no discernible pattern noted or patterns with no definable nomenclature; twice a year: two readings in a given year; once a year: one reading in a given year; twice a month: two readings in a given month; and one measurement: one reading followed by at least two consecutive years of no record. Periods of no record are noted in the following list if at least 6 months of consecutive no readings are found in daily measurements, and at least one year of consecutive no readings are found for monthly, bimonthly, or quarterly measurements. An * indicates that a regression curve is plotted for well; a † indicates that data prior to stated Period of Record (POR) or data for significant periods within POR, may be found in paper files at the Florida District office of the U.S. Geological Survey, W.R.D., located in Tallahassee, Florida.

APPENDIX II

Monthly Maximum, Mean, Minimum and 75-, 50-, and 25-Percent Quartile Values

Data used for the graphs of the maximum, minimum, and mean monthly mean graphs and the quartile graphs for 125 wells are presented below. These maximum and minimum values presented here are not necessarily those in the Extreme Values for Period of Record listed for each well, since these values in this table represent mean values. No data is available for the 10 wells that have less than 5 years of data. A dash indicates that less than 2 data points were available for that month. These data are ordered on the USGS Site ID.
